This manual provides critical safety instructions on the proper setup, operation, maintenance, and service of this machine/tool. Save this document, refer to it often, and use it to instruct other operators.

Failure to read, understand and follow the instructions in this manual may result in fire or serious personal injury—including amputation, electrocution, or death.

The owner of this machine/tool is solely responsible for its safe use. This responsibility includes but is not limited to proper installation in a safe environment, personnel training and usage authorization, proper inspection and maintenance, manual availability and comprehension, application of safety devices, cutting/sanding/grinding tool integrity, and the usage of personal protective equipment.

The manufacturer will not be held liable for injury or property damage from negligence, improper training, machine modifications or misuse.

Some dust created by power sanding, sawing, grinding, drilling, and other construction activities contains chemicals known to the State of California to cause cancer, birth defects or other reproductive harm. Some examples of these chemicals are:

- Lead from lead-based paints.
- Crystalline silica from bricks, cement and other masonry products.
- Arsenic and chromium from chemically-treated lumber.

Your risk from these exposures varies, depending on how often you do this type of work. To reduce your exposure to these chemicals: Work in a well ventilated area, and work with approved safety equipment, such as those dust masks that are specially designed to filter out microscopic particles.

Contact Info

We stand behind our machines! If you have questions or need help, contact us with the information below. Before contacting, make sure you get the **serial number** and **manufacture date** from the machine ID label. This will help us help you faster.

Grizzly Technical Support
1815 W. Battlefield
Springfield, MO 65807
Phone: (570) 546-9663
Email: techsupport@grizzly.com

We want your feedback on this manual. What did you like about it? Where could it be improved? Please take a few minutes to give us feedback.

Grizzly Documentation Manager
P.O. Box 2069
Bellingham, WA 98227-2069
Email: manuals@grizzly.com

Manual Accuracy

We are proud to provide a high-quality owner's manual with your new machine!

We made every effort to be exact with the instructions, specifications, drawings, and photographs in this manual. Sometimes we make mistakes, but our policy of continuous improvement also means that **sometimes the machine you receive is slightly different than shown in the manual**.

If you find this to be the case, and the difference between the manual and machine leaves you confused or unsure about something, check our website for an updated version. We post current manuals and manual updates for free on our website at [www.grizzly.com](http://www.grizzly.com).

Alternatively, you can call our Technical Support for help. Before calling, make sure you write down the **Manufacture Date** and **Serial Number** from the machine ID label (see below). This information is required for us to provide proper tech support, and it helps us determine if updated documentation is available for your machine.
Identification

Figure 1. Model G0622 controls and features.

P. Stand Wheels
MODEL G0622 4" X 6" METAL-CUTTING BANDSAW

Product Dimensions:

- Weight: 117 lbs.
- Width (side-to-side) x Depth (front-to-back) x Height: 34 x 14 x 38 in.
- Footprint (Length x Width): 34 x 14 in.

Shipping Dimensions:

- Type: Cardboard Box
- Content: Machine
- Weight: 122 lbs.
- Length x Width x Height: 39 x 13 x 15 in.
- Must Ship Upright: Yes

Electrical:

- Power Requirement: 110V, Single-Phase, 60 Hz
- Prewired Voltage: 110V
- Full-Load Current Rating: 5A
- Minimum Circuit Size: 15A
- Connection Type: Cord & Plug
- Power Cord Included: Yes
- Power Cord Length: 6-1/2 ft.
- Power Cord Gauge: 18 AWG
- Plug Included: Yes
- Included Plug Type: 5-15
- Switch Type: Toggle Safety Switch w/Removable Key & Automatic Shut-Off

Motors:

Main

- Horsepower: 3/4 HP
- Phase: Single-Phase
- Amps: 5A
- Speed: 1725 RPM
- Type: TEFC Capacitor-Start Induction
- Power Transfer: V-Belt Drive
- Bearings: Shielded & Permanently Lubricated
- Centrifugal Switch/Contacts Type: Internal

Main Specifications:

Operation Info

- Blade Speeds: 78, 108, 180 FPM
- Std. Blade Length: 64-1/2 in.
- Blade Size Range: 1/2 in.
Cutting Capacities

Cutting Height................................................................................................................................. 6 in.
Angle Cuts........................................................................................................................................ 0 - 60 deg.
Vise Jaw Depth................................................................................................................................. 6-1/2 in.
Vise Jaw Height................................................................................................................................. 3-1/4 in.
Max. Capacity Rectangular Height at 90 Deg........................................................................................... 4-1/2 in.
Max. Capacity Rectangular Width at 90 Deg............................................................................................ 6 in.
Max. Capacity Round at 90 Deg........................................................................................................... 4-1/2 in.
Max. Capacity Rectangular Height at 45 Deg........................................................................................... 4-1/2 in.
Max. Capacity Rectangular Width at 45 Deg........................................................................................... 3-1/2 in.
Max. Capacity Round at 45 Deg.......................................................................................................... 3-1/2 in.
Max. Capacity Rectangular Height at 60 Deg........................................................................................... 4-1/2 in.
Max. Capacity Rectangular Width at 60 Deg........................................................................................ 5 in.
Max. Capacity Round at 60 Deg.......................................................................................................... 4-1/2 in.

Construction

Table.................................................................................................................................................. Cast Iron

Blade Guides Upper.......................................................................................................................... Ball Bearing
Blade Guides Lower.......................................................................................................................... Ball Bearing
Mobile Base..................................................................................................................................... Built-In

Table Info

Table Size Length............................................................................................................................ 10-1/4 in.
Table Size Width................................................................................................................................. 6-3/4 in.
Table Size Thickness.......................................................................................................................... 1-1/4 in.
Floor To Cutting Area Height.............................................................................................................. 33 in.

Other Specifications:

Country of Origin.............................................................................................................................. China
Warranty........................................................................................................................................... 1 Year
Approximate Assembly & Setup Time.............................................................................................. 30 Minutes
Serial Number Location.................................................................................................................. ID on Body Frame
ISO 9001 Factory................................................................................................................................. No
Certified by a Nationally Recognized Testing Laboratory (NRTL)....................................................... No

Features:

Horizontal and Vertical Operation
Automatic Shut-Off
3/4 HP Motor
Work Stop
For Your Own Safety, Read Instruction Manual Before Operating This Machine

The purpose of safety symbols is to attract your attention to possible hazardous conditions. This manual uses a series of symbols and signal words intended to convey the level of importance of the safety messages. The progression of symbols is described below. Remember that safety messages by themselves do not eliminate danger and are not a substitute for proper accident prevention measures. Always use common sense and good judgment.

**DANGER** Indicates an imminently hazardous situation which, if not avoided, **WILL** result in death or serious injury.

**WARNING** Indicates a potentially hazardous situation which, if not avoided, **COULD** result in death or serious injury.

**CAUTION** Indicates a potentially hazardous situation which, if not avoided, **MAY** result in minor or moderate injury. It may also be used to alert against unsafe practices.

**NOTICE** Alerts the user to useful information about proper operation of the machine to avoid machine damage.

Safety Instructions for Machinery

**WARNING**

**OWNER’S MANUAL.** Read and understand this owner's manual BEFORE using machine.

**TRAINED OPERATORS ONLY.** Untrained operators have a higher risk of being hurt or killed. Only allow trained/supervised people to use this machine. When machine is not being used, disconnect power, remove switch keys, or lock-out machine to prevent unauthorized use—especially around children. Make your workshop kid proof!

**DANGEROUS ENVIRONMENTS.** Do not use machinery in areas that are wet, cluttered, or have poor lighting. Operating machinery in these areas greatly increases the risk of accidents and injury.

**MENTAL ALERTNESS REQUIRED.** Full mental alertness is required for safe operation of machinery. Never operate under the influence of drugs or alcohol, when tired, or when distracted.

**ELECTRICAL EQUIPMENT INJURY RISKS.** You can be shocked, burned, or killed by touching live electrical components or improperly grounded machinery. To reduce this risk, only allow qualified service personnel to do electrical installation or repair work, and always disconnect power before accessing or exposing electrical equipment.

**DISCONNECT POWER FIRST.** Always disconnect machine from power supply BEFORE making adjustments, changing tooling, or servicing machine. This prevents an injury risk from unintended startup or contact with live electrical components.

**EYE PROTECTION.** Always wear ANSI-approved safety glasses or a face shield when operating or observing machinery to reduce the risk of eye injury or blindness from flying particles. Everyday eyeglasses are NOT approved safety glasses.
WEARING PROPER APPAREL. Do not wear clothing, apparel or jewelry that can become entangled in moving parts. Always tie back or cover long hair. Wear non-slip footwear to reduce risk of slipping and losing control or accidentally contacting cutting tool or moving parts.

HAZARDOUS DUST. Dust created by machinery operations may cause cancer, birth defects, or long-term respiratory damage. Be aware of dust hazards associated with each workpiece material. Always wear a NIOSH-approved respirator to reduce your risk.

HEARING PROTECTION. Always wear hearing protection when operating or observing loud machinery. Extended exposure to this noise without hearing protection can cause permanent hearing loss.

REMOVE ADJUSTING TOOLS. Tools left on machinery can become dangerous projectiles upon startup. Never leave chuck keys, wrenches, or any other tools on machine. Always verify removal before starting!

USE CORRECT TOOL FOR THE JOB. Only use this tool for its intended purpose—do not force it or an attachment to do a job for which it was not designed. Never make unapproved modifications—modifying tool or using it differently than intended may result in malfunction or mechanical failure that can lead to personal injury or death!

AWKWARD POSITIONS. Keep proper footing and balance at all times when operating machine. Do not overreach! Avoid awkward hand positions that make workpiece control difficult or increase the risk of accidental injury.

CHILDREN & BYSTANDERS. Keep children and bystanders at a safe distance from the work area. Stop using machine if they become a distraction.

GUARDS & COVERS. Guards and covers reduce accidental contact with moving parts or flying debris. Make sure they are properly installed, undamaged, and working correctly BEFORE operating machine.

FORCING MACHINERY. Do not force machine. It will do the job safer and better at the rate for which it was designed.

NEVER STAND ON MACHINE. Serious injury may occur if machine is tipped or if the cutting tool is unintentionally contacted.

STABLE MACHINE. Unexpected movement during operation greatly increases risk of injury or loss of control. Before starting, verify machine is stable and mobile base (if used) is locked.

USE RECOMMENDED ACCESSORIES. Consult this owner’s manual or the manufacturer for recommended accessories. Using improper accessories will increase the risk of serious injury.

UNATTENDED OPERATION. To reduce the risk of accidental injury, turn machine OFF and ensure all moving parts completely stop before walking away. Never leave machine running while unattended.

MAINTAIN WITH CARE. Follow all maintenance instructions and lubrication schedules to keep machine in good working condition. A machine that is improperly maintained could malfunction, leading to serious personal injury or death.

DAMAGED PARTS. Regularly inspect machine for damaged, loose, or mis-adjusted parts—or any condition that could affect safe operation. Immediately repair/replace BEFORE operating machine. For your own safety, DO NOT operate machine with damaged parts!

MAINTAIN POWER CORDS. When disconnecting cord-connected machines from power, grab and pull the plug—NOT the cord. Pulling the cord may damage the wires inside. Do not handle cord/plug with wet hands. Avoid cord damage by keeping it away from heated surfaces, high traffic areas, harsh chemicals, and wet/damp locations.

EXPERIENCING DIFFICULTIES. If at any time you experience difficulties performing the intended operation, stop using the machine! Contact our Technical Support at (570) 546-9663.
Additional Safety for Horizontal Metal Bandsaws

⚠️ WARNING

Serious injury or death can occur from getting fingers, hair, or clothing entangled in rotating or moving parts or making direct contact with the moving blade. To minimize risk of injury, anyone operating this machine MUST completely heed hazards and warnings below.

**BLADE CONDITION.** Do not operate with dull, cracked, or badly worn blade. Inspect blades for cracks and missing teeth before each use.

**HAND PLACEMENT.** Never position hands or fingers in line with the cut or under bandsaw headstock while lowering or operating. Hands could be cut or crushed.

**ENTANGLEMENT HAZARDS.** Do not operate this saw without blade guard in place. Loose clothing, jewelry, long hair and work gloves can be drawn into working parts.

**BLADE REPLACEMENT.** When replacing blades, disconnect the machine from power, wear gloves to protect hands and safety glasses to protect eyes.

**WORKPIECE HANDLING.** Always properly support workpiece with table, vise, or some type of support fixture. Flag long pieces to avoid a tripping hazard. Never hold the workpiece with your hands during a cut.

**UNSTABLE WORKPIECES.** Avoid cutting workpieces that cannot be properly supported or clamped in a vise or jig, because they can unexpectedly move while cutting and draw the operator's hands into the blade causing serious personal injury. Examples are chains, cables, round or oblong-shaped workpieces, and those with internal or built-in moving or rotating parts, etc.

**FIRE HAZARD.** Use EXTREME CAUTION if cutting magnesium. Using the wrong cutting fluid could lead to chip fire and possible explosion.

**CUTTING FLUID SAFETY.** Cutting fluids are poisonous. Always follow manufacturer's cutting-fluid safety instructions. Pay particular attention to contact, contamination, inhalation, storage and disposal warnings. Spilled cutting fluid invites slipping hazards.

**HOT SURFACES.** Contact with hot surfaces from machine components, ejections of hot chips, swarf, and the workpiece itself can cause burns.

⚠️ WARNING

Like all machinery there is potential danger when operating this machine. Accidents are frequently caused by lack of familiarity or failure to pay attention. Use this machine with respect and caution to decrease the risk of operator injury. If normal safety precautions are overlooked or ignored, serious personal injury may occur.

⚠️ CAUTION

No list of safety guidelines can be complete. Every shop environment is different. Always consider safety first, as it applies to your individual working conditions. Use this and other machinery with caution and respect. Failure to do so could result in serious personal injury, damage to equipment, or poor work results.
SECTION 2: POWER SUPPLY

Availability
Before installing the machine, consider the availability and proximity of the required power supply circuit. If an existing circuit does not meet the requirements for this machine, a new circuit must be installed. To minimize the risk of electrocution, fire, or equipment damage, installation work and electrical wiring must be done by an electrician or qualified service personnel in accordance with all applicable codes and standards.

WARNING
Electrocution, fire, shock, or equipment damage may occur if machine is not properly grounded and connected to power supply.

Full-Load Current Rating
The full-load current rating is the amperage a machine draws at 100% of the rated output power. On machines with multiple motors, this is the amperage drawn by the largest motor or sum of all motors and electrical devices that might operate at one time during normal operations.

Full-Load Current Rating at 110V........ 5 Amps
The full-load current is not the maximum amount of amps that the machine will draw. If the machine is overloaded, it will draw additional amps beyond the full-load rating.

If the machine is overloaded for a sufficient length of time, damage, overheating, or fire may result—especially if connected to an undersized circuit. To reduce the risk of these hazards, avoid overloading the machine during operation and make sure it is connected to a power supply circuit that meets the specified circuit requirements.

WARNING
Serious injury could occur if you connect machine to power before completing setup process. DO NOT connect to power until instructed later in this manual.

110V Circuit Requirements
This machine is prewired to operate on a power supply circuit that has a verified ground and meets the following requirements:

Nominal Voltage ................................... 110V–120V
Cycle ...................................................... 60 Hz
Phase .................................................. Single-Phase
Power Supply Circuit ....................... 15 Amps
A power supply circuit includes all electrical equipment between the breaker box or fuse panel in the building and the machine. The power supply circuit used for this machine must be sized to safely handle the full-load current drawn from the machine for an extended period of time. (If this machine is connected to a circuit protected by fuses, use a time delay fuse marked D.)

CAUTION
For your own safety and protection of property, consult an electrician if you are unsure about wiring practices or electrical codes in your area.

Note: Circuit requirements in this manual apply to a dedicated circuit—where only one machine will be running on the circuit at a time. If machine will be connected to a shared circuit where multiple machines may be running at the same time, consult an electrician or qualified service personnel to ensure circuit is properly sized for safe operation.
Grounding & Plug Requirements
This machine MUST be grounded. In the event of certain malfunctions or breakdowns, grounding reduces the risk of electric shock by providing a path of least resistance for electric current.

This machine is equipped with a power cord that has an equipment-grounding wire and a grounding plug. Only insert plug into a matching receptacle (outlet) that is properly installed and grounded in accordance with all local codes and ordinances. DO NOT modify the provided plug!

Improper connection of the equipment-grounding wire can result in a risk of electric shock. The wire with green insulation (with or without yellow stripes) is the equipment-grounding wire. If repair or replacement of the power cord or plug is necessary, do not connect the equipment-grounding wire to a live (current carrying) terminal.

Check with a qualified electrician or service personnel if you do not understand these grounding requirements, or if you are in doubt about whether the tool is properly grounded. If you ever notice that a cord or plug is damaged or worn, disconnect it from power, and immediately replace it with a new one.

Extension Cords
We do not recommend using an extension cord with this machine. If you must use an extension cord, only use it if absolutely necessary and only on a temporary basis.

Extension cords cause voltage drop, which can damage electrical components and shorten motor life. Voltage drop increases as the extension cord size gets longer and the gauge size gets smaller (higher gauge numbers indicate smaller sizes).

Any extension cord used with this machine must be in good condition and contain a ground wire and matching plug/receptacle. Additionally, it must meet the following size requirements:

Minimum Gauge Size ......................14 AWG
Maximum Length (Shorter is Better).......50 ft.
SECTION 3: SETUP

Needed for SetUp

The following are needed to complete the set up process, but are not included with your machine:

<table>

</tbody>
</table>

Unpacking

This machine was carefully packaged for safe transport. When unpacking, separate all enclosed items from packaging materials and inspect them for shipping damage. If items are damaged, please call us immediately at (570) 546-9663.

IMPORTANT: Save all packaging materials until you are completely satisfied with the machine and have resolved any issues between Grizzly or the shipping agent. You MUST have the original packaging to file a freight claim. It is also extremely helpful if you need to return your machine later.

WARNING

SUFFOCATION HAZARD!
Keep children and pets away from plastic bags or packing materials shipped with this machine.
## Inventory

The following is a list of items shipped with your machine. Before beginning setup, lay these items out and inventory them.

If any non-proprietary parts are missing (e.g. a nut or a washer), we will gladly replace them; or for the sake of expediency, replacements can be obtained at your local hardware store.

### Inventory: (Figure 3)

- Flat Head Screw M6-1 x 12 ..................... 1
- Fender Washer 6mm ................................ 1
- Hex Nut M6-1 ..................................... 1

**NOTICE**

If you cannot find an item on this list, carefully check around/inside the machine and packaging materials. Often, these items get lost in packaging materials while unpacking or they are pre-installed at the factory.
Clean-up

The unpainted surfaces of your machine are coated with a heavy-duty rust preventative that prevents corrosion during shipment and storage. This rust preventative works extremely well, but it will take a little time to clean.

Be patient and do a thorough job cleaning your machine. The time you spend doing this now will give you a better appreciation for the proper care of your machine’s unpainted surfaces.

There are many ways to remove this rust preventative, but the following steps work well in a wide variety of situations. Always follow the manufacturer’s instructions with any cleaning product you use and make sure you work in a well-ventilated area to minimize exposure to toxic fumes.

**Before cleaning, gather the following:**
- Disposable rags
- Cleaner/degreaser (WD®40 works well)
- Safety glasses & disposable gloves
- Plastic paint scraper (optional)

**Basic steps for removing rust preventative:**

1. Put on safety glasses.
2. Coat the rust preventative with a liberal amount of cleaner/degreaser, then let it soak for 5–10 minutes.
3. Wipe off the surfaces. If your cleaner/degreaser is effective, the rust preventative will wipe off easily. If you have a plastic paint scraper, scrape off as much as you can first, then wipe off the rest with the rag.
4. Repeat Steps 2–3 as necessary until clean, then coat all unpainted surfaces with a quality metal protectant to prevent rust.

**WARNING**
Gasoline and petroleum products have low flash points and can explode or cause fire if used to clean machinery. Avoid using these products to clean machinery.

**CAUTION**
Many cleaning solvents are toxic if inhaled. Only work in a well-ventilated area.

**NOTICE**
Avoid harsh solvents like acetone or brake parts cleaner that may damage painted surfaces. Always test on a small, inconspicuous location first.

T23692—Orange Power Degreaser
A great product for removing the waxy shipping grease from the non-painted parts of the machine during clean up.

Call 1-800-523-4777 To Order
Site Considerations

Weight Load
Refer to the Machine Data Sheet for the weight of your machine. Make sure that the surface upon which the machine is placed will bear the weight of the machine, additional equipment that may be installed on the machine, and the heaviest workpiece that will be used. Additionally, consider the weight of the operator and any dynamic loading that may occur when operating the machine.

Space Allocation
Consider the largest size of workpiece that will be processed through this machine and provide enough space around the machine for adequate operator material handling or the installation of auxiliary equipment. With permanent installations, leave enough space around the machine to open or remove doors/covers as required by the maintenance and service described in this manual. See below for required space allocation.

Physical Environment
The physical environment where the machine is operated is important for safe operation and longevity of machine components. For best results, operate this machine in a dry environment that is free from excessive moisture, hazardous chemicals, airborne abrasives, or extreme conditions. Extreme conditions for this type of machinery are generally those where the ambient temperature range exceeds 41°–104°F; the relative humidity range exceeds 20%–95% (non-condensing); or the environment is subject to vibration, shocks, or bumps.

Electrical Installation
Place this machine near an existing power source. Make sure all power cords are protected from traffic, material handling, moisture, chemicals, or other hazards. Make sure to leave enough space around machine to disconnect power supply or apply a lockout/tagout device, if required.

Lighting
Lighting around the machine must be adequate enough that operations can be performed safely. Shadows, glare, or strobe effects that may distract or impede the operator must be eliminated.

Figure 5. Minimum working clearances.
Assembly

The machine must be fully assembled before it can be operated. Before beginning the assembly process, refer to Needed for Setup and gather all listed items. To ensure the assembly process goes smoothly, first clean any parts that are covered or coated in heavy-duty rust preventative (if applicable).

To assemble the bandsaw:

1. Install head-locking pin (refer to Page 22).

2. With help of an assistant, lift bandsaw onto a pair of closely spaced sawhorses or other suitable support (see Figure 6).

3. Attach legs to bandsaw with (8) M8-1.25 x 25 hex bolts, (8) 8mm flat washers, (8) 8mm lock washers, and (8) M8-1.25 hex nuts (see Figure 6).

   **Note:** At this time, tighten with a 14mm wrench or socket just enough to secure the parts. Final tightening will take place when the stand is fully assembled.

4. Attach short brace to legs with (4) M8-1.25 x 16 carriage bolts, (4) 8mm flat washers, (4) 8mm lock washers, and (4) M8-1.25 hex nuts (see Figure 7).

5. Remove bandsaw from sawhorses and attach long braces to legs with (4) M8-1.25 x 16 carriage bolts, (4) 8mm flat washers, (4) 8mm lock washers, and (4) M8-1.25 hex nuts (see Figure 8).

6. Attach wheel-mounting bracket to bottom of two legs with (2) M6-1 x 12 hex bolts, (4) 6mm flat washers, (2) 6mm lock washers, and (2) M6-1 hex nuts, as shown in Figure 9.
7. Slide axle through holes in wheel-mounting bracket (see Figure 10).

8. Slide wheels onto axle on outside of mounting brackets, and secure them with (2) cotter pins (see Figure 10).

9. On opposite side of stand, insert handle into holes and secure with (2) cotter pins (see Figure 11).

10. Check to see if bandsaw is relatively level, then final tighten all bolts and nuts.

11. Place pulley cover over motor and gear shafts, and secure it with pre-installed M6-1 x 12 Phillips head screws and 12mm flat washers, as shown in Figure 12.

12. Open pulley cover, then insert keys into the slots on pulley shafts.

13. Slide the large-diameter motor pulley onto the motor shaft (see Figure 13).

14. Install worm gear pulley with small-diameter wheel on shaft closest to gear box.
15. Use a straightedge to check alignment of the pulley wheels, as shown in Figure 14, and adjust them as needed.

![Figure 14. Checking pulley alignment.](image)

16. When the pulley wheels are aligned, tighten the set screws on both pulleys.

17. Unthread motor lock bolt, then pivot motor up and slide the V-belt into pulley grooves, as shown in Figure 15.

![Figure 15. V-belt installation.](image)

18. Release motor, letting its weight tension V-belt, then thread motor lock bolt against the side of bandsaw.

19. Install work stop shaft into side of bandsaw then lock it in place by tightening the set screw, as shown in Figure 16.

![Figure 16. Installing work stop shaft.](image)

20. Slide work stop onto end of the shaft and lock it into position with locking lever, as shown in Figure 17.

![Figure 17. Work stop locking lever.](image)
Starting the machine:

1. Read the entire instruction manual.
2. Make sure all tools and foreign objects have been removed from the machine.
3. Connect the bandsaw to power.
4. Put on safety glasses and secure loose clothing or long hair.
5. Remove head-locking pin and raise the bandsaw by the handle.
6. Start the bandsaw while keeping your finger near the ON/OFF switch at all times during the test run (Figure 18). The bandsaw should run smoothly with little or no vibration.

—If you suspect any problems, immediately stop the bandsaw and correct before continuing.

—If you need any help with your bandsaw call our Tech Support at (570) 546-9663.

Recommended Adjustments

The adjustments listed below have been performed at the factory. However, because of the many variables involved with shipping, we recommend that you at least verify the following adjustments to ensure the adjustments remain unchanged.

Step-by-step instructions on verifying these adjustments can be found in SECTION 7: SERVICE ADJUSTMENTS.

Factory adjustments that should be verified:

1. Blade Tracking (Page 34).
2. Squaring the Blade (Page 35).
SECTION 4: OPERATIONS

Operation Overview

This overview gives you the basic process that happens during an operation with this machine. Familiarize yourself with this process to better understand the remaining parts of the Operation section.

To complete a typical operation, the operator does the following:

1. Prepares the workpiece for cutting.
2. Raises the head.
3. Securely clamps the workpiece in the vise and adjusts the vise angle for the operation.
4. Checks/adjusts the V-belt position on the pulleys to ensure the correct cutting speed for the workpiece.
5. Adjusts the spring tension for the correct feed rate.
6. Makes sure the workpiece and bandsaw are stable and there are no obstructions for the cut.
7. Wears safety glasses.
8. Starts the machine and waits for the blade to reach full speed.
9. Slowly lowers the head until the blade makes contact with the workpiece, then releases the head so that the spring-controlled feed rate continues to lower the blade into the workpiece until the cut is finished.
10. Stops the machine, raises the head, and removes the workpieces.
Operation Tips

The following tips will help you safely and effectively operate your bandsaw and help you get the maximum life out of your saw blades.

Horizontal Cutting

- Use the work stop to quickly and accurately cut multiple pieces of stock to the same length (see Figure 19).

- Clamp the material firmly in the vise jaws to ensure a straight cut through the material.

- Let the blade reach full speed before engaging the workpiece. Never start a cut with the blade in contact with the workpiece (see Figure 20).

- Chips should be curled and silvery. If the chips are thin and powder like, increase your feed rate (refer to the Metal Chip Inspection Chart on Page 27).

- If the chips are burned, reduce the blade speed.

- Wait until the blade has completely stopped before removing the workpiece from the vise, and avoid touching the cut end—it could be very hot!

Vertical Cutting

- Workpieces that cannot be properly supported or stabilized without a vise should not be cut in the vertical position. Examples are chains, cables, round or oblong-shaped workpieces, workpieces with internal or built-in moving or rotating parts, etc.

- Make sure that the vertical table assembly is securely fastened to the bandsaw frame so it will adequately support the workpiece.

- Always keep your fingers away from the blade and always hold the workpiece securely in your hand (Figure 21).

- Adjust the blade guides as close as possible to the workpiece to minimize side-to-side blade movement.

NOTICE

Loosen blade tension at the end of each day to prolong blade life.
Vertical Operation

The Model G0622 can easily be set up for vertical cutting operations.

To assemble the bandsaw for vertical cutting:

1. DISCONNECT BANDSAW FROM POWER!

2. Remove the two flat head screws and the blade guide cover shown in Figure 22.

3. Install the table and replace the two screws removed in Step 2.

4. Install the table bracket with (1) M6-1 x 12 flat head screw, (1) 6mm fender washer, (1) M6-1 hex nut, and pre-installed hex bolt, as shown in Figure 23.

5. Place a level on the table, as shown in Figure 24, then use the adjustment bolt shown in Figure 25 to make the table level.
6. Install the safety bracket and lock it in place with the pin shown in Figure 26 to keep the saw from falling.

**Note:** To ensure the safety bracket fits securely in the notch on the body frame, the safety bracket may need to be slightly "modified" with a hammer or other appropriate implement to fit securely.

---

**Head Locking Pin**

---

**WARNING**

The head locking pin secures the head in the down, horizontal position. You MUST secure the head with the locking pin before moving the machine to prevent the head unexpectedly springing up causing the machine to tip or fall. Otherwise, serious personal injury or property damage could occur.

The head locking pin safely secures the head in the down position. To ensure the head does not unexpectedly spring up and tip the bandsaw over, this locking pin must be properly inserted when the bandsaw is not in use or before moving it.

**To use the head locking pin:**

1. **DISCONNECT BANDSAW FROM POWER!**

2. Fully lower the head down, then insert the locking pin through the holes in the head pivot arm and base, as shown in Figure 27.

3. Before connecting the machine to power, remove the locking pin.

---

Figure 26. Safety bracket.

Figure 27. Head locking pin correctly inserted.
## Vise

### CAUTION

Always turn the saw OFF and allow the blade to come to a complete stop before using the vise! Failure to follow this caution may lead to injury.

The vise can hold material up to six inches wide and be set to cut angles from 0° to 60°.

**Tools Needed**

<table>
<thead>
<tr>
<th>Qty</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>Wrench or Socket 12mm</td>
</tr>
<tr>
<td>1</td>
<td>Machinist Square</td>
</tr>
</tbody>
</table>

**To use the vise:**

1. DISCONNECT BANDSAW FROM POWER!

2. Loosen the two hex bolts shown in Figure 28.

3. Use the scale as a guide to set your angle or use a machinist square to set the angle of the vise, as shown in Figure 29.

4. Tighten the hex bolts.

5. Loosen the hex bolt on the opposite jaw so the jaw can float, then match the angle of the workpiece and re-tighten the hex bolt.

6. Tighten the vise against the workpiece.

**Note:** Figure 30 shows the correct methods of holding different workpiece shapes.

--

**Figure 28.** Setting vise angle.

**Figure 29.** Squaring vise to blade.

**Figure 30.** Workholding options by material shape.
Blade Guides

The blade guides should be as close to the workpiece as possible. This will help ensure straight cuts by keeping the blade from twisting and drifting off the cut line.

To adjust the blade guides:

1. DISCONNECT BANDSAW FROM POWER!

2. Loosen the knob shown in Figure 31 and slide the blade guide as close to the workpiece as possible, then re-tighten the knob.

Feed Rate

The feed rate is controlled by the spring and handle shown in Figure 32.

To adjust the feed rate:

Slower: Twist the handle clockwise to add tension to the spring.

Faster: Twist the handle counterclockwise to remove tension from the spring.

Figure 31. Blade guides.

Figure 32. Feed rate adjustment.
Blade Speed

The bandsaw is capable of operating at 78, 108, or 180 FPM (Feet Per Minute). The speed can easily be adjusted by changing the V-belt placement. Figure 33 shows an illustration for pulley positions for each speed.

![Figure 33. Pulley & V-belt configuration.](image)

To change the blade speeds:

1. **DISCONNECT BANDSAW FROM POWER!**

2. Loosen the motor tension bolt to allow the motor to pivot (Figure 34).

![Figure 34. Motor tension bolt.](image)

3. Raise the motor to relieve the belt tension and position the belt in the desired pulley alignment.

4. Release the motor and let its weight tension the belt.

5. Tighten the motor tension bolt back against the frame of the bandsaw.

Blade Terminology

Selecting the right blade for the cut requires a knowledge of various blade characteristics. Use the illustration in Figure 35 and the following descriptions to better understand blade characteristics.

![Figure 35. Bandsaw blade terminology.](image)

A. **Kerf:** The amount of material removed by the blade during cutting.

B. **Tooth Set:** The amount each tooth is bent left or right from the blade.

C. **Gauge:** The thickness of the blade.

D. **Blade Width:** The widest point of the blade measured from the tip of the tooth to the back edge of the blade.

E. **Tooth Rake:** The angle of the tooth from a line perpendicular to the length of the blade.

F. **Gullet Depth:** The distance from the tooth tip to the bottom of the curved area (gullet).

G. **Tooth Pitch:** The distance between tooth tips.

H. **Blade Back:** The distance between the bottom of the gullet and the back edge of the blade.

I. **TPI:** The number of teeth per inch measured from gullet to gullet.
Blade Selection

Blade Size
The Model G0622 accepts only $\frac{1}{2}'' \times 0.025 \times 64\frac{1}{2}''$ blades.

Tooth Pitch
Usually measured as TPI (Teeth Per Inch), tooth pitch determines the size/number of the teeth. More teeth per inch (fine pitch) will cut slower, but smoother; while fewer teeth per inch (coarse pitch) will cut rougher, but faster.

As a general rule, choose blades that will have at least three teeth in the material at all times. Use fine pitched blades on harder metals and coarse pitched blades on softer metals. When selecting blades, refer to Figure 36 for recommended blade tooth (TPI) and speed (FPM) based on the workpiece material.

Tooth Style
When selecting blades, another option to consider is the shape, gullet size, teeth set and teeth angle—otherwise known as “Tooth Style.” Many blade manufacturers offer variations of the four basic styles shown in Figure 37.

![Figure 37. Bandsaw blade tooth types.](image)

Tooth Set
Three of the most common tooth sets are alternate, wavy, and raker (see Figure 38).

![Figure 38. Bandsaw tooth sets.](image)
Metal Chip Inspection Chart

The best method of evaluating the performance of your metal cutting operation is to inspect the chips that are formed from cutting. Refer to the chart below for chip inspection guidelines.

Figure 40. Blades

T10499—1.2 KVA Blade Welder
Make your own bandsaw blades from inexpensive band stock, or repair what you already have with this blade welder. Features blade shear, grinder, and annealing. Operates on 115V, 15A power supply. For ¼–½” blade widths.

Figure 42. T10499 Blade Welder.
**H5408—Blade Tensioning Gauge**  
The Blade Tensioning Gauge ensures long blade life, reduced blade breakage, and straight cutting by indicating correct tension. A precision dial indicator provides you with a direct readout in PSI.

![Figure 43. H5408 Blade Tensioning Gauge.](image)

**SB1365—South Bend Way Oil-ISO 68**  
Engineered for the high pressure exerted on horizontal or vertical ways and slides. Protects against rust and corrosion. Ensures stick-free, smooth motion which maximizes finishes and extends the life of your machine. Won’t gum up! 12 oz. AMGA#2 (ISO 68 Equivalent)

![Figure 44. Recommended products for machine lubrication.](image)

**G5618—Deburring Tool with two Blades**  
The quickest tool for smoothing freshly sheared metal edges. Comes with two blades, one for steel and aluminum and one for brass and cast iron.

![Figure 45. G5618 Deburring Tool.](image)

**D2273—Single Roller Stand**  
**D2274—5 Roller Stand**  
These roller stands are invaluable when working solo in any shop for outfeeding and support tasks. With $15\frac{7}{8}$" wide rollers, adjustable 26"—44$\frac{5}{8}$" height, and all steel construction make them convenient and rugged.

![Figure 46. D2273 and D2274 single and 5 roller stands.](image)
SECTION 6: MAINTENANCE

Lubrication

Before applying lubricant to any area, wipe the area clean to avoid contamination. Lubricate the vice screw shown in Figure 47 with multi-purpose gear grease.

Schedule

For optimum performance from your machine, follow this maintenance schedule and refer to any specific instructions given in this section.

Daily Check:
• Loose mounting bolts.
• Damaged saw blade.
• Worn or damaged wires.
• Any other unsafe condition.
• Clean after each use.

Monthly Check:
• V-belt tension, damage, or wear.
• Lubricate vise screw.

Annual Check:
• Lubricate gear box.

Cleaning

Use a brush and a shop vacuum to remove chips and other debris from the machine. Keep the non-painted surfaces rust-free with regular applications of products like G96® Gun Treatment, SLIPIT®, or Boeshield® T-9.

Periodically, remove the blade and thoroughly clean all metal chips or built-up grease from the wheel surfaces and blade housing.
**SECTION 7: SERVICE**

Review the troubleshooting procedures in this section if a problem develops with your machine. If you need replacement parts or additional help with a procedure, call our Technical Support. **Note: Please gather the serial number and manufacture date of your machine before calling.**

### Troubleshooting

#### Motor & Electrical

<table>
<thead>
<tr>
<th>Symptom</th>
<th>Possible Cause</th>
<th>Possible Solution</th>
</tr>
</thead>
</table>
| Machine does not start or a breaker trips. | 1. Plug/receptacle is at fault or wired incorrectly.  
2. Start capacitor is at fault.  
4. Power supply is at fault/switched OFF.  
5. ON/OFF switch is at fault.  
6. Wiring is open/has high resistance.  
7. Motor is at fault. | 1. Test for good contact or correct the wiring.  
2. Test/replace if faulty.  
3. Correct motor wiring connections.  
4. Make sure all hot lines/grounds are operational and have correct voltage on all legs.  
5. Replace faulty ON button or ON/OFF switch.  
6. Troubleshoot wires for internal/external breaks; check for disconnected/corroded connections; repair/replace wiring.  
7. Test/repair/replace. |
| Machine stalls or is underpowered. | 1. Wrong blade for the workpiece material (metal).  
2. Feed rate too fast for task.  
3. V-belt slipping.  
4. Blade is slipping on wheels.  
5. Pulley/sprocket slipping on shaft.  
6. Motor bearings are at fault.  
7. Motor is at fault. | 1. Use blade with correct properties for your type of cutting.  
2. Decrease feed rate.  
3. Replace bad V-belt and re-tension.  
4. Adjust blade tracking and tension.  
5. Replace loose pulley/shaft.  
6. Test by rotating shaft; rotational grinding/loose shaft requires bearing replacement.  
7. Test/repair/replace. |
| Machine has vibration or noisy operation. | 1. V-belt is slapping belt cover.  
2. V-belt worn or loose.  
3. Pulley is loose. | 1. Inspect belt cover for proper installation.  
2. Inspect/replace belt with a new one.  
3. Realign/replace shaft, pulley, setscrew, and key as required. |
<table>
<thead>
<tr>
<th>SYMPTOM</th>
<th>POSSIBLE CAUSE</th>
<th>CORRECTIVE ACTION</th>
</tr>
</thead>
</table>
| Machine is loud when cutting or bogs down in the cut. | 1. Excessive feed rate.  
2. The blade TPI is too great, or the material is too coarse. | 1. Refer to Feed Rate on Page 24, or Blade Speed on Page 25 and adjust as required.  
2. Refer to Blade Selection on Page 26 and adjust as required. |
| Blades break often. | 1. The workpiece is loose in the vise.  
2. The feed or cut speed is wrong.  
3. The blade TPI is too great, or the material is too coarse.  
4. The blade is rubbing on the wheel flange.  
5. The bandsaw is being started with the blade resting on the workpiece.  
6. The guide bearings are misaligned, or the blade is rubbing on the wheel flange.  
7. The blade is too thick, or the blades are of low quality. | 1. Clamp the workpiece tighter, or use a jig to hold the workpiece.  
2. Refer to Feed Rate on Page 24, or Blade Speed on Page 25 and adjust as required.  
3. Refer to Blade Selection on Page 26 and adjust as required.  
4. Refer to Blade Tracking on Page 34, and adjust as required.  
5. Start bandsaw and then slowly lower the headstock by setting the feed rate.  
6. Refer to Blade Tracking on Page 34, or Blade Guides on Page 24, and adjust as required.  
7. Use a higher quality blade. |
| Blade dulls prematurely. | 1. The cutting speed is too fast.  
2. The blade TPI is too coarse.  
3. The blade feed pressure is too light.  
4. The workpiece has hard spots, welds, or scale is on the material.  
5. The blade is twisted.  
6. The blade is slipping on the wheels. | 1. Refer to Blade Speed on Page 25 and adjust as required.  
2. Refer to Blade Selection on Page 26 and adjust as required.  
3. Refer to Feed Rate on Page 24, and adjust as required.  
4. Increase the feed pressure, and reduce the cutting speed.  
5. Replace the blade.  
6. Refer to Blade Tension on Page 35, and adjust as required. |
| Blade wears on one side. | 1. The blade guides are worn or misadjusted.  
2. The blade guide slide bracket is loose.  
3. The wheels are out of alignment. | 1. Refer to Blade Guides on Page 24 and replace or adjust.  
2. Tighten the blade guide bracket.  
3. Refer to Blade Tracking on Page 34, and adjust as required. |
| Teeth are ripping from the blade. | 1. The feed pressure is too heavy and the blade speed is too slow; or the blade TPI is too coarse for the workpiece.  
2. The workpiece is vibrating in the vise.  
3. The blade gullets are loading up with chips. | 1. Refer to Blade Selection on Page 26 and decrease the feed pressure. Refer to Feed Rate on Page 24, and adjust as required.  
2. Re-clamp the workpiece in the vise, and use a jig if required.  
3. Use a coarser-tooth blade. |
| The cuts are crooked. | 1. The feed pressure is too high.  
2. The guide bearings are out of adjustment, or too far away from the workpiece.  
3. The blade tension is low.  
4. The blade is dull.  
5. The blade speed is wrong. | 1. Refer to Feed Rate on Page 24, and adjust as required.  
2. Refer to Blade Guides on Page 24 and replace or adjust.  
3. Refer to Blade Tension on Page 35, and adjust as required.  
4. Refer to Blade Change on Page 33 and replace the blade.  
5. Refer to Blade Speed on Page 25 and adjust as required. |
Blade Change

Blades should be changed when they become dull, damaged, or when your operation requires a different blade.

To change the blade on the bandsaw:

1. DISCONNECT BANDSAW FROM POWER!
2. Raise the head of the bandsaw to the vertical position, use the head locking pin to hold it in place, then remove the wheel access cover.
3. Loosen the tension knob and slip the blade off of the wheels.
4. Install the new blade through both blade guide bearings, as shown in Figure 49, and around the bottom wheel.
5. Hold the blade around the bottom wheel with one hand and slip it around the top wheel with the other hand, keeping the blade between the blade guide bearings.

   Note: It is sometimes possible to flip the blade inside out, in which case the blade will be installed in the wrong direction. Check to make sure the blade teeth are facing toward the workpiece, as shown in Figure 50, after mounting to the bandsaw. Some blades will have a directional arrow as a guide.
6. When the blade is around both wheels, adjust the position so the back of the blade is against the shoulder of the wheels (see Figure 51).
7. Tighten the tension knob so the blade will not slip on the wheels upon start up.
8. Connect the bandsaw to the power source.
9. Briefly turn the bandsaw ON then OFF to position the blade and resume the previous tracking.

   —If the tracking needs to be adjusted, see Blade Tracking in the next section.
   —If the tracking is fine, proceed to Blade Tension on Page 35.
Blade Tracking

The blade tracking has been properly set at the factory. The tracking will rarely need to be adjusted if the bandsaw is used properly.

Tools Needed

<table>
<thead>
<tr>
<th>Tool</th>
<th>Qty</th>
</tr>
</thead>
<tbody>
<tr>
<td>Wrench or Socket 14mm</td>
<td>1</td>
</tr>
</tbody>
</table>

To adjust the blade tracking on the bandsaw:

1. DISCONNECT BANDSAW FROM POWER!
2. Position the bandsaw in the vertical position.
3. Open the wheel access cover.
4. Loosen, but do not remove the lower hex bolt in the blade wheel tilting mechanism shown in Figure 52.
5. Use the blade tension knob to release the blade tension (see Figure 53).

![Figure 53. Adjusting tracking hex bolt.](image)

6. Adjust the tracking hex bolt, as shown in Figure 53, then tighten the lower hex bolt loosened in Step 4.

   —Tightening the tracking hex bolt will move the blade closer to the shoulder of the wheel.

   —Loosening the tracking hex bolt will move the blade away from the shoulder.

7. Tension the blade.
8. Reconnect the power and turn ON the bandsaw.

   —If the blade tracks along the shoulder of the wheel (without rubbing), the blade is tracking properly and this adjustment is completed.

   —If the blade walks away from the shoulder of the wheel or hits the shoulder, turn the bandsaw OFF, disconnect it from power, then repeat Steps 4-8.

9. Turn the bandsaw OFF, disconnect it from power, then replace the blade guard and wheel access cover.
**Blade Tension**

Proper blade tension is essential to long blade life, straight cuts, and efficient cutting times.

Two major signs that you do not have the correct blade tension are: 1) The blade stalls in the cut and is slipping on the wheels, and 2) the blade frequently breaks from being too loose.

**To tension the blade on the bandsaw:**

1. Make sure the blade is tracking properly.

2. DISCONNECT BANDSAW FROM POWER!

3. Loosen and slide the blade guides as far apart as they will go then tighten them down again.

4. Turn the tension knob in Figure 53 clockwise to tighten the blade as tight as you can.

5. Using moderate finger pressure, push against the side of the blade. The blade should not move more than 0.004”.

   **Note:** We recommend using a blade tensioning gauge, like the one found in ACCESSORIES on Page 28. If you use this option please follow the instructions included with your gauge.

**Squaring the Blade**

It is always a good idea during the life of your saw to check and adjust this setting. This adjustment will improve your cutting results and extend the life of your blade.

**To square the blade to the bed of the table:**

1. DISCONNECT BANDSAW FROM POWER!

2. Separate the blade guides as far as possible, the lower the head of the bandsaw all the way until it contacts the horizontal stop.

3. Place a square on the table bed and against the edge of the blade (Figure 54), and check different points along the length of the table between the blade guides.

4. Loosen the hex bolt shown in Figure 54, and rotate the seat until the blade is vertical to the bed, then re-tighten the hex bolt.
Blade Guide Bearings

The blade guide bearings must be properly adjusted to make square cuts. One bearing on each assembly has an eccentric bushing that allows it to be adjusted so the blade is square to the vise. The bearings are secured in place by a hex nut and lock washer, as shown in Figure 55.

Before adjusting the blade guide bearings, make sure that you have squared the blade to the table as discussed in the previous section.

To adjust the blade guide bearings:

1. DISCONNECT BANDSAW FROM POWER!

2. Position the vise to 90°, then lock it in place.

3. Put a machinist's square against the face of the vise and move it over to the blade.
   —The square should evenly touch both the face of the vise and the blade. If it does, skip ahead to Step 6.
   —If the square does not evenly touch the blade, but it does evenly touch the vise, continue with the next step.

4. Loosen the hex nuts that secure the eccentric bushings attached to the guide bearings.

5. Adjust the bearings as necessary to force the blade to be 90° to the vise, then re-tighten the hex nuts.

6. If any of the bearings are not touching the blade evenly, loosen the hex nuts and adjust them so the contact surface of the bearings touch the blade evenly.

   **Note:** Since the bearings twist the blade into position, it is acceptable if there is 0.001"-0.002" gap between the blade and the front or back of the bearing. Just make sure not to squeeze the blade too tightly with the bearings. After the guide bearings are set, you should be able to rotate the guide bearings (although they will be stiff) with your fingers.

7. Adjust the backing bearing in the same manner, but leave a gap between 0.002-0.003" from the back of the blade.
SECTION 8: WIRING

These pages are current at the time of printing. However, in the spirit of improvement, we may make changes to the electrical systems of future machines. Compare the manufacture date of your machine to the one stated in this manual, and study this section carefully.

If there are differences between your machine and what is shown in this section, call Technical Support at (570) 546-9663 for assistance BEFORE making any changes to the wiring on your machine. An updated wiring diagram may be available. Note: Please gather the serial number and manufacture date of your machine before calling. This information can be found on the main machine label.

WARNING

Wiring Safety Instructions

SHOCK HAZARD. Working on wiring that is connected to a power source is extremely dangerous. Touching electrified parts will result in personal injury including but not limited to severe burns, electrocution, or death. Disconnect the power from the machine before servicing electrical components!

MODIFICATIONS. Modifying the wiring beyond what is shown in the diagram may lead to unpredictable results, including serious injury or fire. This includes the installation of unapproved aftermarket parts.

WIRE CONNECTIONS. All connections must be tight to prevent wires from loosening during machine operation. Double-check all wires disconnected or connected during any wiring task to ensure tight connections.

CIRCUIT REQUIREMENTS. You MUST follow the requirements at the beginning of this manual when connecting your machine to a power source.

WIRE/COMPONENT DAMAGE. Damaged wires or components increase the risk of serious personal injury, fire, or machine damage. If you notice that any wires or components are damaged while performing a wiring task, replace those wires or components.

MOTOR WIRING. The motor wiring shown in these diagrams is current at the time of printing but may not match your machine. If you find this to be the case, use the wiring diagram inside the motor junction box.

CAPACITORS/INVERTERS. Some capacitors and power inverters store an electrical charge for up to 10 minutes after being disconnected from the power source. To reduce the risk of being shocked, wait at least this long before working on capacitors.

EXPERIENCING DIFFICULTIES. If you are experiencing difficulties understanding the information included in this section, contact our Technical Support at (570) 546-9663.

NOTICE

The photos and diagrams included in this section are best viewed in color. You can view these pages in color at www.grizzly.com.

⚠️ **WARNING**

Safety labels help reduce the risk of serious injury caused by machine hazards. If any label comes off or becomes unreadable, the owner of this machine MUST replace it in the original location before resuming operations. For replacements, contact (800) 523-4777 or www.grizzly.com.

    ____________________________________________________________
Grizzly Industrial, Inc. warrants every product it sells for a period of 1 year to the original purchaser from the date of purchase. This warranty does not apply to defects due directly or indirectly to misuse, abuse, negligence, accidents, repairs or alterations or lack of maintenance. This is Grizzly's sole written warranty and any and all warranties that may be implied by law, including any merchantability or fitness, for any particular purpose, are hereby limited to the duration of this written warranty. We do not warrant or represent that the merchandise complies with the provisions of any law or acts unless the manufacturer so warrants. In no event shall Grizzly's liability under this warranty exceed the purchase price paid for the product and any legal actions brought against Grizzly shall be tried in the State of Washington, County of Whatcom.

We shall in no event be liable for death, injuries to persons or property or for incidental, contingent, special, or consequential damages arising from the use of our products.

To take advantage of this warranty, contact us by mail or phone and give us all the details. We will then issue you a “Return Number,” which must be clearly posted on the outside as well as the inside of the carton. We will not accept any item back without this number. Proof of purchase must accompany the merchandise.

The manufacturers reserve the right to change specifications at any time because they constantly strive to achieve better quality equipment. We make every effort to ensure that our products meet high quality and durability standards and we hope you never need to use this warranty.

Please feel free to write or call us if you have any questions about the machine or the manual.

Thank you again for your business and continued support. We hope to serve you again soon.
