This manual provides critical safety instructions on the proper setup, operation, maintenance, and service of this machine/tool. Save this document, refer to it often, and use it to instruct other operators.

Failure to read, understand and follow the instructions in this manual may result in fire or serious personal injury—including amputation, electrocution, or death.

The owner of this machine/tool is solely responsible for its safe use. This responsibility includes but is not limited to proper installation in a safe environment, personnel training and usage authorization, proper inspection and maintenance, manual availability and comprehension, application of safety devices, cutting/sanding/grinding tool integrity, and the usage of personal protective equipment.

The manufacturer will not be held liable for injury or property damage from negligence, improper training, machine modifications or misuse.

Some dust created by power sanding, sawing, grinding, drilling, and other construction activities contains chemicals known to the State of California to cause cancer, birth defects or other reproductive harm. Some examples of these chemicals are:

- Lead from lead-based paints.
- Crystalline silica from bricks, cement and other masonry products.
- Arsenic and chromium from chemically-treated lumber.

Your risk from these exposures varies, depending on how often you do this type of work. To reduce your exposure to these chemicals: Work in a well ventilated area, and work with approved safety equipment, such as those dust masks that are specially designed to filter out microscopic particles.

INTRODUCTION

Manual Accuracy

We are proud to offer this manual with your new machine! We’ve made every effort to be exact with the instructions, specifications, drawings, and photographs of the machine we used when writing this manual. However, sometimes we still make an occasional mistake.

Also, owing to our policy of continuous improvement, your machine may not exactly match the manual. If you find this to be the case, and the difference between the manual and machine leaves you in doubt, check our website for the latest manual update or call technical support for help.

Before calling, find the manufacture date of your machine by looking at the date stamped into the machine ID label (see below). This will help us determine if the manual version you received matches the manufacture date of your machine.

For your convenience, we post all available manuals and manual updates for free on our website at www.grizzly.com. Any updates to your model of machine will be reflected in these documents as soon as they are complete.

Contact Info

We stand behind our machines! If you have questions or need help, contact us with the information below. Before contacting, make sure you get the serial number and manufacture date from the machine ID label. This will help us help you faster.

Grizzly Technical Support  
1815 W. Battlefield  
Springfield, MO 65807  
Phone: (570) 546-9663  
Email: techsupport@grizzly.com

We want your feedback on this manual. What did you like about it? Where could it be improved? Please take a few minutes to give us feedback.

Grizzly Documentation Manager  
P.O. Box 2069  
Bellingham, WA 98227-2069  
Email: manuals@grizzly.com

Machine Description

The mill/drill is used to shape metal and solid workpieces by removing material with the use of a rotating cutting tool.

In milling operations, the cutting tool remains stationary while the workpiece is drawn across it by moving the table.

In drilling operations, the workpiece is held stationary on the table while the cutting tool moves up-and-down with the movement of the spindle and head.
Identification

**MODEL G0704 MILL/DRILL WITH STAND**

**Product Dimensions:**
- Weight: 265 lbs.
- Width (side-to-side) x Depth (front-to-back) x Height: 38 x 24 x 31 in.
- Footprint (Length x Width): 15-3/4 x 16-1/2 in.
- Space Required for Full Range of Movement (Width x Depth): 57 x 25 in.

**Shipping Dimensions:**
- **Carton #1**
  - Type: Wood Crate
  - Content: Machine
  - Weight: 295 lbs.
  - Length x Width x Height: 30 x 28 x 36 in.
- **Carton #2**
  - Type: Cardboard Box
  - Content: Stand
  - Weight: 77 lbs.
  - Length x Width x Height: 17 x 17 x 33 in.

**Electrical:**
- Power Requirement: 110V, Single-Phase, 60 Hz
- Prewired Voltage: 110V
- Full-Load Current Rating: 12A
- Minimum Circuit Size: 15A
- Connection Type: Cord & Plug
- Power Cord Included: Yes
- Power Cord Length: 6 ft.
- Power Cord Gauge: 16 AWG
- Plug Included: Yes
- Included Plug Type: 5-15
- Switch Type: ON/OFF Push Button Switch w/Safety Cover

**Motors:**
- **Main**
  - Horsepower: 1 HP
  - Phase: Single-Phase
  - Amps: 12A
  - Speed: 4300 RPM
  - Type: Universal
  - Power Transfer: Gear Drive
  - Bearings: Shielded & Permanently Lubricated
  - Centrifugal Switch/Contacts Type: N/A
Main Specifications:

Operation Info

Spindle Travel................................................................................................................................. 2 in.
Max Distance Spindle to Column.................................................................................................... 7-1/2 in.
Max Distance Spindle to Table........................................................................................................ 13 in.
Longitudinal Table Travel (X-Axis)............................................................................................... 18-7/8 in.
Cross Table Travel (Y-Axis)............................................................................................................. 6-7/8 in.
Vertical Head Travel (Z-Axis)........................................................................................................... 11 in.
Head Tilt (Left/Right)......................................................................................................................... 90 deg.
Drilling Capacity for Cast Iron.......................................................................................................... 3/4 in.
Drilling Capacity for Steel................................................................................................................. 5/8 in.
End Milling Capacity......................................................................................................................... 3/4 in.
Face Milling Capacity........................................................................................................................ 2-1/2 in.

Table Info

Table Length.................................................................................................................................. 26-5/8 in.
Table Width................................................................................................................................... 7-1/16 in.
Table Thickness.............................................................................................................................. 1-3/4 in.
Number of T-Slots.......................................................................................................................... 3
T-Slot Size........................................................................................................................................ 7/16 in.
T-Slots Centers................................................................................................................................. 2-1/2 in.

Spindle Info

Spindle Taper................................................................................................................................... R-8
Number of Vertical Spindle Speeds..................................................................................................... Variable
Range of Vertical Spindle Speeds......................................................................................................... 50 – 1125, 100 - 2250 RPM
Quill Diameter.................................................................................................................................. 2.36 in.
Drawbar Thread Size.......................................................................................................................... 7/16-20
Drawbar Length................................................................................................................................. 9-11/16 in.
Spindle Bearings.............................................................................................................................. Tapered Roller Bearings

Construction

Spindle Housing/Quill........................................................................................................................ Cast Iron
Table............................................................................................................................................... Precision-Ground Cast Iron
Head............................................................................................................................................... Cast Iron
Column/Base................................................................................................................................. Cast Iron
Base............................................................................................................................................... Cast Iron
Stand............................................................................................................................................... Steel
Paint Type/Finish.............................................................................................................................. Enamel

Other Specifications:

Country of Origin ............................................................................................................................... China
Warranty ........................................................................................................................................... 1 Year
Approximate Assembly & Setup Time ............................................................................................. 1 Hour
Serial Number Location ................................................................................................................... ID Label on Head Casting
Sound Rating ...................................................................................................................................... 80 dB
ISO 9001 Factory ............................................................................................................................... Yes
Certified by a Nationally Recognized Testing Laboratory (NRTL) ................................................................. No

Features:

Digital spindle scale reads metric, inches, zero, set, on/off
Forward/reverse switch
Chip guard
Digital display for spindle speed
Dovetail column
Front-Mounted fine feed knob
Coolant trough
Accessories Included:

- Drill chuck 3–16mm with B16 taper
- Drill chuck arbor B16 x R8
- Two T-bolts
- Two open-ended combo wrenches
- Chuck key
- Oil bottle
- Extra fuse
- Hex wrenches
- Standard and Phillips screwdrivers
- Tool box
SECTION 1: SAFETY

For Your Own Safety, Read Instruction Manual Before Operating This Machine

The purpose of safety symbols is to attract your attention to possible hazardous conditions. This manual uses a series of symbols and signal words intended to convey the level of importance of the safety messages. The progression of symbols is described below. Remember that safety messages by themselves do not eliminate danger and are not a substitute for proper accident prevention measures. Always use common sense and good judgment.

⚠️ DANGER  Indicates an imminently hazardous situation which, if not avoided, WILL result in death or serious injury.

⚠️ WARNING  Indicates a potentially hazardous situation which, if not avoided, COULD result in death or serious injury.

⚠️ CAUTION  Indicates a potentially hazardous situation which, if not avoided, MAY result in minor or moderate injury. It may also be used to alert against unsafe practices.

NOTICE  This symbol is used to alert the user to useful information about proper operation of the machine.

Safety Instructions for Machinery

⚠️ WARNING

OWNER’S MANUAL. Read and understand this owner’s manual BEFORE using machine.

TRAINED OPERATORS ONLY. Untrained operators have a higher risk of being hurt or killed. Only allow trained/supervised people to use this machine. When machine is not being used, disconnect power, remove switch keys, or lock-out machine to prevent unauthorized use—especially around children. Make workshop kid proof!

DANGEROUS ENVIRONMENTS. Do not use machinery in areas that are wet, cluttered, or have poor lighting. Operating machinery in these areas greatly increases the risk of accidents and injury.

MENTAL ALERTNESS REQUIRED. Full mental alertness is required for safe operation of machinery. Never operate under the influence of drugs or alcohol, when tired, or when distracted.

ELECTRICAL EQUIPMENT INJURY RISKS. You can be shocked, burned, or killed by touching live electrical components or improperly grounded machinery. To reduce this risk, only allow qualified service personnel to do electrical installation or repair work, and always disconnect power before accessing or exposing electrical equipment.

DISCONNECT POWER FIRST. Always disconnect machine from power supply BEFORE making adjustments, changing tooling, or servicing machine. This prevents an injury risk from unintended startup or contact with live electrical components.

EYE PROTECTION. Always wear ANSI-approved safety glasses or a face shield when operating or observing machinery to reduce the risk of eye injury or blindness from flying particles. Everyday eyeglasses are not approved safety glasses.
WARNING

WEARING PROPER APPAREL. Do not wear clothing, apparel or jewelry that can become entangled in moving parts. Always tie back or cover long hair. Wear non-slip footwear to avoid accidental slips, which could cause loss of workpiece control.

HAZARDOUS DUST. Dust created while using machinery may cause cancer, birth defects, or long-term respiratory damage. Be aware of dust hazards associated with each workpiece material, and always wear a NIOSH-approved respirator to reduce your risk.

HEARING PROTECTION. Always wear hearing protection when operating or observing loud machinery. Extended exposure to this noise without hearing protection can cause permanent hearing loss.

REMOVE ADJUSTING TOOLS. Tools left on machinery can become dangerous projectiles upon startup. Never leave chuck keys, wrenches, or any other tools on machine. Always verify removal before starting!

INTENDED USAGE. Only use machine for its intended purpose and never make modifications not approved by Grizzly. Modifying machine or using it differently than intended may result in malfunction or mechanical failure that can lead to serious personal injury or death!

AWKWARD POSITIONS. Keep proper footing and balance at all times when operating machine. Do not overreach! Avoid awkward hand positions that make workpiece control difficult or increase the risk of accidental injury.

CHILDREN & BYSTANDERS. Keep children and bystanders at a safe distance from the work area. Stop using machine if they become a distraction.

GUARDS & COVERS. Guards and covers reduce accidental contact with moving parts or flying debris. Make sure they are properly installed, undamaged, and working correctly.

FORCING MACHINERY. Do not force machine. It will do the job safer and better at the rate for which it was designed.

NEVER STAND ON MACHINE. Serious injury may occur if machine is tipped or if the cutting tool is unintentionally contacted.

STABLE MACHINE. Unexpected movement during operation greatly increases risk of injury or loss of control. Before starting, verify machine is stable and mobile base (if used) is locked.

USE RECOMMENDED ACCESSORIES. Consult this owner’s manual or the manufacturer for recommended accessories. Using improper accessories will increase the risk of serious injury.

UNATTENDED OPERATION. To reduce the risk of accidental injury, turn machine OFF and ensure all moving parts completely stop before walking away. Never leave machine running while unattended.

MAINTAIN WITH CARE. Follow all maintenance instructions and lubrication schedules to keep machine in good working condition. A machine that is improperly maintained could malfunction, leading to serious personal injury or death.

CHECK DAMAGED PARTS. Regularly inspect machine for any condition that may affect safe operation. Immediately repair or replace damaged or mis-adjusted parts before operating machine.

MAINTAIN POWER CORDS. When disconnecting cord-connected machines from power, grab and pull the plug—NOT the cord. Pulling the cord may damage the wires inside. Do not handle cord/plug with wet hands. Avoid cord damage by keeping it away from heated surfaces, high traffic areas, harsh chemicals, and wet/damp locations.

EXPERIENCING DIFFICULTIES. If at any time you experience difficulties performing the intended operation, stop using the machine! Contact our Technical Support at (570) 546-9663.
Additional Safety for Mill/Drills

⚠️ WARNING ⚠️

You can be seriously injured or killed by getting clothing, jewelry, or long hair entangled with rotating cutter/spindle. You can be severely cut or have fingers amputated from contact with rotating cutters. You can be blinded or struck by broken cutting tools, metal chips, workpieces, or adjustment tools thrown from the rotating spindle with great force. To reduce your risk of serious injury when operating this machine, completely heed and understand the following:

UNDERSTAND ALL CONTROLS. Make sure you understand the function and proper use of all controls before starting. This will help you avoid making mistakes that result in serious injury.

AVOIDING ENTANGLEMENT. DO NOT wear loose clothing, gloves, or jewelry, and tie back long hair. Keep all guards in place and secure. Always allow spindle to stop on its own. DO NOT stop spindle using your hand or any other object.

WEAR FACE SHIELD. Always wear a face shield in addition to safety glasses. This provides more complete protection for your face than safety glasses alone.

USE CORRECT SPINDLE SPEED. Follow recommended speeds and feeds for each size and type of cutting tool. This helps avoid tool breakage during operation and ensures best cutting results.

INSPECT CUTTING TOOL. Inspect cutting tools for sharpness, chips, or cracks before each use. Replace dull, chipped, or cracked cutting tools immediately.

PROPERLY SECURE CUTTER. Firmly secure cutting tool or drill bit so it does not fly out of spindle during operation.

POWER DISRUPTION. In the event of a local power outage during operation, turn spindle switch OFF to avoid a possible sudden startup once power is restored.

CLEAN MACHINE SAFELY. Metal chips or shavings can be razor sharp. DO NOT clear chips by hand or compressed air that can force chips farther into machine—use a brush or vacuum instead. Never clear chips while spindle is turning.

SECURE WORKPIECE TO TABLE. Clamp workpiece to table or secure in a vise mounted to table, so workpiece cannot unexpectedly shift or spin during operation. NEVER hold workpiece by hand during operation.

PROPERLY MAINTAIN MACHINE. Keep machine in proper working condition to help ensure that it functions safely and all guards and other components work as intended. Perform routine inspections and all necessary maintenance. Never operate machine with damaged or worn parts that can break or result in unexpected movement during operation.

DISCONNECT POWER FIRST. To reduce risk of electrocution or injury from unexpected startup, make sure mill/drill is turned OFF, disconnected from power, and all moving parts have come to a complete stop before changing cutting tools or starting any inspection, adjustment, or maintenance procedure.

REMOVE CHUCK KEY & SPINDLE TOOLS. Always remove chuck key, drawbar wrench, and other tools used on the spindle immediately after use. This will prevent them from being thrown by the spindle upon startup.
SECTION 2: POWER SUPPLY

Availability
Before installing the machine, consider the availability and proximity of the required power supply circuit. If an existing circuit does not meet the requirements for this machine, a new circuit must be installed. To minimize the risk of electrocution, fire, or equipment damage, installation work and electrical wiring must be done by an electrician or qualified service personnel in accordance with all applicable codes and standards.

Full-Load Current Rating
The full-load current rating is the amperage a machine draws at 100% of the rated output power. On machines with multiple motors, this is the amperage drawn by the largest motor or sum of all motors and electrical devices that might operate at one time during normal operations.

Full-Load Current Rating at 110V.....3.2 Amps
The full-load current is not the maximum amount of amps that the machine will draw. If the machine is overloaded, it will draw additional amps beyond the full-load rating.

If the machine is overloaded for a sufficient length of time, damage, overheating, or fire may result—especially if connected to an undersized circuit. To reduce the risk of these hazards, avoid overloading the machine during operation and make sure it is connected to a power supply circuit that meets the requirements in the following section.

Circuit Requirements
This machine is prewired to operate on a 110V power supply circuit that has a verified ground and meets the following requirements:

Nominal Voltage .......................110V/120V
Cycle ........................................ 60 Hz
Phase ........................................ Single-Phase
Power Supply Circuit ................... 15 Amps

A power supply circuit includes all electrical equipment between the breaker box or fuse panel in the building and the machine. The power supply circuit used for this machine must be sized to safely handle the full-load current drawn from the machine for an extended period of time. (If this machine is connected to a circuit protected by fuses, use a time delay fuse marked D.)

CAUTION
For your own safety and protection of property, consult an electrician if you are unsure about wiring practices or electrical codes in your area.

Note: The circuit requirements listed in this manual apply to a dedicated circuit—where only one machine will be running at a time. If this machine will be connected to a shared circuit where multiple machines will be running at the same time, consult a qualified electrician to ensure that the circuit is properly sized for safe operation.
Improper connection of the equipment-grounding wire can result in a risk of electric shock. The wire with green insulation (with or without yellow stripes) is the equipment-grounding wire. If repair or replacement of the power cord or plug is necessary, do not connect the equipment-grounding wire to a live (current carrying) terminal.

Check with a qualified electrician or service personnel if you do not understand these grounding requirements, or if you are in doubt about whether the tool is properly grounded. If you ever notice that a cord or plug is damaged or worn, disconnect it from power, and immediately replace it with a new one.

**Extension Cords**

We do not recommend using an extension cord with this machine. If you must use an extension cord, only use it if absolutely necessary and only on a temporary basis.

Extension cords cause voltage drop, which may damage electrical components and shorten motor life. Voltage drop increases as the extension cord size gets longer and the gauge size gets smaller (higher gauge numbers indicate smaller sizes).

Any extension cord used with this machine must contain a ground wire, match the required plug and receptacle, and meet the following requirements:

**Minimum Gauge Size**............................16 AWG

**Maximum Length (Shorter is Better)**.......50 ft.

---

**Grounding & Plug Requirements**

This machine MUST be grounded. In the event of certain malfunctions or breakdowns, grounding reduces the risk of electric shock by providing a path of least resistance for electric current.

This machine is equipped with a power cord that has an equipment-grounding wire and a grounding plug (similar to the figure below). The plug must only be inserted into a matching receptacle (outlet) that is properly installed and grounded in accordance with all local codes and ordinances.

---

**WARNING**

Serious injury could occur if you connect the machine to power before completing the setup process. DO NOT connect to power until instructed later in this manual.

---

**CAUTION**

SHOCK HAZARD!

Two-prong outlets do not meet the grounding requirements for this machine. Do not modify or use an adapter on the plug provided—if it will not fit the outlet, have a qualified electrician install the proper outlet with a verified ground.
SECTION 3: SETUP

**WARNING**

To reduce your risk of serious injury, read this entire manual BEFORE using machine.

**WARNING**

To reduce risk of eye or face injury from flying chips, always wear approved safety glasses and a face shield when operating this machine.

**NOTICE**

If you are not experienced with this type of machine, WE STRONGLY RECOMMEND that you seek additional training outside of this manual. Read books/magazines or get formal training before beginning any projects. Regardless of the content in this section, Grizzly Industrial will not be held liable for accidents caused by lack of training.

---

### Needed for Setup

The following are needed to complete the setup process, but are not included with your machine:

---

### Unpacking

Your machine was carefully packaged for safe transportation. Remove the packaging materials from around your machine and inspect it. If you discover any damage, please call us immediately at (570) 546-9663 for advice.

Save the containers and all packing materials for possible inspection by the carrier or its agent. Otherwise, filing a freight claim can be difficult.

When you are completely satisfied with the condition of your shipment, inventory the contents.

**WARNING**

**SUCCOFICATION HAZARD!**

Keep children and pets away from plastic bags or packing materials shipped with this machine. Discard immediately.
Inventory

The following is a list of items shipped with your machine. Before beginning setup, lay these items out and inventory them.

If any non-proprietary parts are missing (e.g. a nut or a washer), we will gladly replace them; or for the sake of expediency, replacements can be obtained at your local hardware store.

NOTICE
If you cannot find an item on this list, carefully check around/inside the machine and packaging materials. Often, these items get lost in packaging materials while unpacking or they are pre-installed at the factory.
The unpainted surfaces of your machine are coated with a heavy-duty rust preventative that prevents corrosion during shipment and storage. This rust preventative works extremely well, but it will take a little time to clean.

Be patient and do a thorough job cleaning your machine. The time you spend doing this now will give you a better appreciation for the proper care of your machine's unpainted surfaces.

There are many ways to remove this rust preventative, but the following steps work well in a wide variety of situations. Always follow the manufacturer’s instructions with any cleaning product you use and make sure you work in a well-ventilated area to minimize exposure to toxic fumes.

**Before cleaning, gather the following:**
- Disposable Rags
- Cleaner/degreaser (WD•40 works well)
- Safety glasses & disposable gloves
- Plastic paint scraper (optional)

**Basic steps for removing rust preventative:**

1. Put on safety glasses.

2. Coat the rust preventative with a liberal amount of cleaner/degreaser, then let it soak for 5–10 minutes.

3. Wipe off the surfaces. If your cleaner/degreaser is effective, the rust preventative will wipe off easily. If you have a plastic paint scraper, scrape off as much as you can first, then wipe off the rest with the rag.

4. Repeat **Steps 2–3** as necessary until clean, then coat all unpainted surfaces with a quality metal protectant to prevent rust.

---

**WARNING**
Gasoline or products with low flash points can explode or cause fire if used to clean machinery. Avoid cleaning with these products.

**CAUTION**
Many cleaning solvents are toxic if concentrated amounts are inhaled. Only work in a well-ventilated area.

**NOTICE**
Avoid chlorine-based solvents, such as acetone or brake parts cleaner, that may damage painted surfaces. Test all cleaners in an inconspicuous area before using to make sure they will not damage paint.
Site Considerations

Weight Load
Refer to the Machine Data Sheet for the weight of your machine. Make sure that the surface upon which the machine is placed will bear the weight of the machine, additional equipment that may be installed on the machine, and the heaviest workpiece that will be used. Additionally, consider the weight of the operator and any dynamic loading that may occur when operating the machine.

Space Allocation
Consider the largest size of workpiece that will be processed through this machine and provide enough space around the machine for adequate operator material handling or the installation of auxiliary equipment. With permanent installations, leave enough space around the machine to open or remove doors/covers as required by the maintenance and service described in this manual. See below for required space allocation.

Physical Environment
The physical environment where the machine is operated is important for safe operation and longevity of machine components. For best results, operate this machine in a dry environment that is free from excessive moisture, hazardous chemicals, airborne abrasives, or extreme conditions. Extreme conditions for this type of machinery are generally those where the ambient temperature range exceeds 41°–104°F; the relative humidity range exceeds 20–95% (non-condensing); or the environment is subject to vibration, shocks, or bumps.

Electrical Installation
Place this machine near an existing power source. Make sure all power cords are protected from traffic, material handling, moisture, chemicals, or other hazards. Make sure to leave access to a means of disconnecting the power source or engaging a lockout/tagout device, if required.

Lighting
Lighting around the machine must be adequate enough that operations can be performed safely. Shadows, glare, or strobe effects that may distract or impede the operator must be eliminated.

Figure 6. Space required for full machine range of motion.
Moving & Placing Machine

To remove your machine from the shipping crate and place it in position:

1. Place the crate adjacent to the location where your machine will be placed, then remove the shipping crate from the pallet.

2. Position the stand into the desired location.

3. Use the vertical handwheel to raise the headstock as far as possible.

4. Hang a lifting strap from the fork of a forklift and place it under the head of the mill/drill, as shown in Figure 7. Take care not to place the straps over any controls that may be damaged during transit.

5. Unbolt the machine from the pallet, then with an assistant steadying the machine to prevent it from swinging, lift it slightly off of the pallet. Use the cross handwheel to move the table forward or backward as necessary to balance the machine so it hangs as close to level as possible.

6. Lift the machine and carefully place it onto the stand.

7. Bolt the machine to the stand with the four M10-1.25 x 50 hex bolts and flat washers.

—If you are placing the machine on a workbench, it must be securely mounted to the workbench surface.

The strongest mounting option is a "Through Mount" where holes are drilled all the way through the workbench, and hex bolts, washers, and hex nuts are used to secure the machine to the workbench.

5. Unbolt the machine from the pallet, then with an assistant steadying the machine to prevent it from swinging, lift it slightly off of the pallet. Use the cross handwheel to move the table forward or backward as necessary to balance the machine so it hangs as close to level as possible.

6. Lift the machine and carefully place it onto the stand.

7. Bolt the machine to the stand with the four M10-1.25 x 50 hex bolts and flat washers.

—If you are placing the machine on a workbench, it must be securely mounted to the workbench surface.

The strongest mounting option is a "Through Mount" where holes are drilled all the way through the workbench, and hex bolts, washers, and hex nuts are used to secure the machine to the workbench.

Figure 8. Example of a through mount setup.

Another option for mounting is a "Direct Mount" where the machine is simply secured to the workbench with a lag screw.

Figure 9. Example of a direct mount setup.
Mounting to Shop Floor

Although not required, we recommend that you mount your new machine cabinet to the floor. Because this is an optional step and floor materials may vary, floor mounting hardware is not included. Generally, you can either bolt the cabinet to the floor or mount it on machine mounts. Both options are described below. Whichever option you choose, it is necessary to level the cabinet with a precision level.

Bolting to Concrete Floors

Lag shield anchors with lag bolts and anchor studs (Figure 10) are two popular methods for anchoring an object to a concrete floor. We suggest you research the many options and methods for mounting your machine and choose the best that fits your specific application.

![Figure 10. Typical fasteners for mounting to concrete floors.](image)

Using Machine Mounts

Using machine mounts, shown in Figure 11, gives the advantage of fast leveling and vibration reduction. The large size of the foot pads distributes the weight of the machine to reduce strain on the floor.

![Figure 11. Machine mount example.](image)

**NOTICE**

We strongly recommend securing your machine to the floor if it is hardwired to the power source. Consult with your electrician to ensure compliance with local codes.

**NOTICE**

Anchor studs are stronger and more permanent alternatives to lag shield anchors; however, they will stick out of the floor, which may cause a tripping hazard if you decide to move your machine.
Assembly

Assembly of the Model G0704 consists of attaching the four handwheel handles to the machine.

To assemble your machine:

1. With a #3 standard screwdriver, install the large handwheel handle on the elevation handwheel (Figure 12).

2. Use the same method to install the three small handwheel handles to the three table travel handwheels (Figure 13).

Figure 12. Elevation handwheel handle.

Figure 13. Table handwheel handles.

Drill Chuck Arbor

Your machine includes a B-16 drill chuck arbor and drill chuck. Before use, the drill chuck must be installed onto the arbor. The drill chuck installation is intended to be semi-permanent.

Tip: For a permanent installation, chill the arbor in the freezer for 15 minutes before performing the following procedure. The taper will expand as it returns to room temperature, permanently locking the chuck.

To install the drill chuck onto the arbor:

1. Clean the grease off the drill chuck and all taper mating surfaces. Pay particular attention to the B-16 bore in the drill chuck—it must be free from all grease, oil, and debris.

2. Retract the drill chuck jaws fully by turning the body of the drill chuck counterclockwise.

3. Insert the arbor into the drill chuck. Tap the arbor lightly with a brass or other soft-headed hammer to get a good fit.

Note: While it may not seem like there is anything keeping the drill chuck in place, the B-16 Taper fit provides a strong bond and will hold the drill chuck tightly (Figure 14).

Figure 14. Drill chuck.

4. Refer to Page 29 for detailed instructions for installing or removing the drill chuck and arbor in the spindle.
Test Run

Once assembly is complete, test run the machine to ensure it is properly connected to power and safety components are functioning correctly.

If you find an unusual problem during the test run, immediately stop the machine, disconnect it from power, and fix the problem BEFORE operating the machine again. The Troubleshooting table in the SERVICE section of this manual can help.

The test run consists of verifying the following: 1) The motor powers up and runs correctly, and 2) the Emergency Stop button stops spindle rotation.

⚠️ WARNING
 Serious injury or death can result from using this machine BEFORE understanding its controls and related safety information. DO NOT operate, or allow others to operate, machine until the information is understood.

⚠️ WARNING
 DO NOT start machine until all preceding setup instructions have been performed. Operating an improperly set up machine may result in malfunction or unexpected results that can lead to serious injury, death, or machine/property damage.

To test run machine:

1. Clear all setup tools away from the machine.
2. Make sure the machine is properly lubricated (see Page 36).
3. Make sure there are no obstructions around or underneath the spindle.
4. Place the spindle direction selection knob in the "0" (OFF) position and press the Emergency Stop button (see Figure 15).
5. Connect the mill/drill to the power source.
6. Turn the speed range selector knob to the "L" (low) position (see Figure 1 on Page 3) and rotate the variable spindle speed knob all the way to the left (slowest) position.
7. Place the spindle direction knob in the "F" (Forward) position. Squeeze the tab on the Emergency Stop button, pull it open, then press the green button. The spindle will begin to turn at a low RPM.
   —When operating correctly, the machine runs smoothly with little or no vibration or rubbing noises.
   —Investigate and correct strange or unusual noises or vibrations before operating the machine further. Always disconnect the machine from power when investigating or correcting potential problems.
8. Press the Emergency Stop button. The machine should stop.
   —If the machine does stop, the Emergency Stop button safety feature is working correctly. Continue to Step 8.
   —If the machine does not stop, the Emergency Stop button safety feature is not working correctly. This safety feature must work properly before proceeding with regular operations. Call Tech Support for help.

Congratulations! The test run is complete. Perform the following Spindle Break-In procedure.
Spindle Break-In

The spindle break-in procedure distributes lubrication throughout the bearings to reduce the risk of early bearing failure if there are any "dry" spots or areas where lubrication has settled in the bearings. You must complete this procedure before placing operational loads on the spindle for the first time when the machine is new or if it has been sitting idle for longer than 6 months.

Always start the spindle break-in at the lowest speed to minimize wear if there are dry spots. Allow the spindle to run long enough to warm up and distribute the bearing grease, then incrementally increase spindle speeds and repeat this process at each speed until reaching the maximum spindle speed. Following the break-in procedure in this progressive manner helps minimize any potential wear that could occur before lubrication is fully distributed.

To perform spindle break-in process:

2. Open the Emergency Stop button cover and press the green button to start the spindle.

3. With the speed range selector knob in the "L" (low) position, turn mill/drill ON and run the spindle at 600 RPM for a minimum of 10 minutes in each direction of rotation.

4. Turn the mill/drill OFF.

5. With the speed range selector knob in the "H" (high) position, turn mill/drill ON and run spindle at 1000 RPM for 5 minutes in each direction of rotation.

6. Repeat Step 5 at 2000 RPM.

7. Turn the mill/drill OFF.

Congratulations! The spindle break-in is complete.

**NOTICE**

Complete the spindle bearing break-in procedure to prevent rapid wear and tear of spindle components once the machine is placed into operation.

**NOTICE**

DO NOT perform this procedure independently of the Test Run section. The machine could be seriously damaged if the controls are set differently than instructed in that section.
TO COMPLETE A TYPICAL OPERATION, THE OPERATOR DOES THE FOLLOWING:

1. Loosens the vertical travel locks, then adjusts the headstock height above the table to ensure there is sufficient room to install the tooling in the spindle and the workpiece on the table.

2. Installs the desired tooling for the job.

3. Positions the workpiece as needed for the operation, then clamps the workpiece using applicable clamping devices, or a vise that is already mounted on the table to ensure the workpiece does not move during the milling/drilling operation.

4. Positions the cutter or drill bit near the workpiece, then tightens vertical travel locks.

5. Selects the appropriate spindle speed for the milling or drilling operation using the speed selector knob and variable spindle speed knob.

6. Unlocks the X- and Y-axis table locks.

7. Wears safety glasses or a face shield.

8. Turns the spindle direction selection knob to the desired direction.

9. Loosens the quill lock lever and uses the quill feed lever or the fine feed knob to set the cutting tool height according to the workpiece.

10. For milling operations, uses the table handwheels to move the table so the cutter removes material evenly from the workpiece.

   For drilling operations, uses the quill feed lever or fine feed knob to lower the drill bit into the workpiece, then raises the drill bit out of the workpiece using the same controls.

11. Turns the spindle direction knob to the "0" position to stop the spindle.

---

**Operation Overview**

The purpose of this overview is to provide the novice machine operator with a basic understanding of how the machine is used during operation, so the machine controls/components discussed later in this manual are easier to understand.

Due to the generic nature of this overview, it is not intended to be an instructional guide. To learn more about specific operations, read this entire manual and seek additional training from experienced machine operators, and do additional research outside of this manual by reading "how-to" books, trade magazines, or websites.

---

**WARNING**

To reduce the risk of serious injury when using this machine, read and understand this entire manual before operating.

**WARNING**

Damage to your eyes and lungs could result from using this machine without proper protective gear. Always wear safety glasses and a respirator when operating this machine.

---

**NOTICE**

If you have never used this type of machine or equipment before, WE STRONGLY RECOMMEND that you read books, review industry trade magazines, or get formal training before beginning any projects. Regardless of the content in this section, Grizzly Industrial will not be held liable for accidents caused by lack of training.
Basic Controls

**WARNING**
To reduce your risk of serious injury, read this entire manual BEFORE using machine.

**WARNING**
Loose hair, clothing, or jewelry could get caught in machinery and cause serious personal injury. Keep these items away from moving parts at all times to reduce this risk.

Use the descriptions and figures below to become familiar with the basic controls of your machine.

**Vertical Handwheel:** Raises and lowers the headstock (Z-Axis).

**Speed Range Selector Knob:** Selects low range (L) or high range (H) for the spindle speed.

**Vertical Travel Locks:** Lock the position of the headstock to the column.

**Fine Feed Lock Knob:** Engages the fine feed knob for precise control of vertical quill travel.

**Fine Feed Knob:** Provides fine control over vertical quill travel.

**Quill Feed Levers:** Provide coarse control over vertical quill travel.

**Drawbar Cap:** Covers the drawbar and upper portion of the spindle.

**Drawbar:** Secures collets and tooling in the spindle taper.

**Spindle and Chuck:** Provide a mounting place for tooling.

**Quill Lock Lever:** Locks the vertical position of the quill when tightened.

---

**Figure 16.** Head controls.

**Figure 17.** Headstock controls (continued).
Cross Handwheel: Moves the table forward and backward (Y-Axis).

Longitudinal Handwheels: Move the table from side to side (X-Axis).

Longitudinal Table Locks: Lock the longitudinal position of the table when tightened.

Cross Table Locks: Lock the cross position of the table when tightened.

Power Button: Turns display **ON/OFF**.

ZERO Button: Resets the display to 0.000". Hold down until "S" flashes on the readout to enable ↑ or ↓ buttons.

IN/MM Button: Toggles the units displayed.

↑ Button: Increases the current depth reading.

↓ Button: Decreases the current depth reading.

Spindle RPM Readout: Displays the speed of the spindle rotation.

Emergency Stop Button: Interrupts the flow of power to the machine.

Variable Spindle Speed Knob: Changes the speed of the spindle rotation.

Spindle Direction Selection Knob: Changes the direction of spindle rotation.
Digital Readout Unit

The digital readout unit gives a precise reading of the vertical positioning of the quill. It can be zeroed at any position and manually increased or decreased independent of quill position when the operation requires it (see Figure 21).

To use the digital readout:

1. Press the power button (see Figure 21). A reading should appear on the display.

2. Press the IN/MM button to select whether units will be displayed in inches or millimeters. Each press of the button switches from one unit to the other.

3. If you want to "zero" the readout at any time, press the ZERO button. The current reading will be cleared and the scale will be reset to 0.000.

   If you want to increase or decrease the reading at any time, press the ZERO button and hold it until "S" flashes on the display. Press the appropriate ‹ or › button, then press the ZERO button again. This is useful when calibrating the mill to known dimensions on a workpiece.

4. Press the ZERO button and hold until "S" flashes, press the ‹ or › button until the display reads 0.000, then press the ZERO button.

5. When the operation is complete, press the power button to conserve the battery.
Calculating Spindle Speed

Closely follow the proper spindle speed and proper feed rate to produce good results, reduce undue strain on all moving parts and increase operator safety.

Prior to milling, determine the spindle speed needed to cut your workpiece, then set the speed on the machine.

To determine the needed spindle speed:

1. Use the table in Figure 22 to determine the cutting speed required for the material of your workpiece.

2. Measure the diameter of your cutting tool in inches.

3. Use the following formula to determine the needed spindle RPM for your operation:

   \[
   \text{(Cutting Speed x 4) / Tool Diameter = RPM}
   \]

### Cutting Speeds for High Speed Steel (HSS) Cutting Tools

</table>

**Note:** For carbide cutting tools, double the cutting speed. These values are a guideline only. Refer to the MACHINERY’S HANDBOOK for more detailed information.

Figure 22. Cutting speed table for HSS cutting tools.
Spindle Speed and Direction

Setting the speed on the Model G0704 is a two part process. The gearbox in the headstock has two gear ranges and the motor is a variable speed unit. Together, these two systems provide an overall speed range of 50–2250 RPM.

When the dial is turned up all the way, the motor draws the full amperage level. When combined with a cutting load, the motor can overheat and become damaged. If high speeds are needed, put the speed range into high "H" then turn the variable speed dial down, away from the maximum position. If the maximum RPM is needed, reduce the cutting load as much as possible and minimize the operation time at these speeds.

To set the spindle speed:

1. Determine the appropriate spindle speed for your operation. See Calculating Spindle Speed on Page 26.

2. Select the appropriate speed range using the speed range selector knob (see Figure 23). "H" represents the high speed range, which is capable of spindle speeds from 100–2250 RPM. "L" represents the low range, which is capable of spindle speeds from 50–1125 RPM.

   **Note:** To maximize spindle torque, use the low range.

3. Make sure the work area is clear and that all safety precautions are taken.

4. Turn the variable spindle speed knob to the far left (slowest) position, then press the green start button and use the spindle direction selection knob to choose the direction of spindle travel and start spindle rotation (Figure 24).

5. Watch the RPM readout and adjust the variable spindle speed knob as needed until the desired RPM is reached.

   **NOTICE**

   **AVOID OVERHEATING MOTOR!**

   DO NOT operate with variable speed dial at full RPM for than a couple minutes or motor overheating may occur. Instead, achieve the same spindle speed by using the high “H” speed range and reducing the motor RPM by turning the variable speed dial down.
Spindle Height Controls

The spindle height is controlled by the quill feed lever and the fine feed knob.

Changing Spindle Position Using Fine Feed Knob

1. Unlock the quill lock lever and tighten the fine feed lock knob.

2. Rotate the fine feed knob to lower or raise the spindle in small increments. Observe the scale on the knob or the digital readout to monitor movement in thousandths of an inch (Figure 26).

3. Tighten the quill lock lever to hold the spindle in a particular position if you choose.

Tip: Milling with the spindle fully extended can cause tool chatter. For maximum spindle rigidity when milling, it is better to keep the spindle retracted into the headstock as far as possible with the quill lock lever tightened, and the fine feed knob tightened.

Figure 25. Spindle controls.

Figure 26. Fine spindle feed controls.
Drill Chuck

To install the drill chuck and arbor:

1. DISCONNECT MILL/DRILL FROM POWER!
2. Remove the drawbar cap.
3. Insert the chuck arbor into the spindle, making sure to line up the slot in the arbor with the pin in the spindle.
4. Thread the drawbar into the arbor until the arbor is seated up into the spindle taper.
5. Use the included spindle pin to prevent the spindle from turning while you use an 8mm wrench to tighten the drawbar.

To remove the chuck and arbor from the spindle:

1. DISCONNECT MILL/DRILL FROM POWER!
2. Remove the drawbar cap.
3. Lock the quill in place with the quill lock lever.
4. Use the included spindle pin to prevent the spindle from turning while you use an 8mm wrench to loosen the drawbar 2–3 turns. DO NOT continue loosening the drawbar without supporting the drill chuck or it will fall from the spindle.
5. Hold the chuck with one hand and finish loosening the drawbar until the chuck falls out of the spindle.

Note: The chuck is attached to the arbor using a B-16 taper. This attachment is considered to be semi-permanent. There should be no need to remove the chuck from the arbor.

6. Re-install the drawbar cap.

NOTICE

The Model G0704 drawbar will extract the arbor from the spindle. Once the arbor or collet has broken free from the spindle taper, be sure to properly support it while continuing to loosen the drawbar. Failure to properly support the arbor or collet while loosening the drawbar will result in the arbor or collet falling out of the spindle, causing damage to machine components.

Note: Do not overtighten the drawbar. Overtightening makes arbor removal difficult and will damage the arbor and threads.
Loading Tooling

Your Model G0704 features an R-8 spindle taper, which gives the freedom to use standard R-8 cutting tools and collets. These optional collets come in many sizes, typically ranging from $\frac{1}{16}"$ to $\frac{7}{8}"$ and 3mm to 20mm, and should be matched to your cutting tool shank size.

To install the tooling:

1. DISCONNECT MILL/DRILL FROM POWER!
2. Remove the drawbar cap.
3. Carefully clean the surface of the tooling and spindle taper. Ensure that it is free of debris and is lightly oiled.
4. If you are using a cutting tool and collet, insert the cutting tool into the collet, then insert the collet up into the spindle taper, making sure the slot in the collet lines up with the pin in the spindle.
   
   If you are using a cutting tool that installs directly into the spindle, insert the tool into the spindle taper, making sure the slot in the tool lines up with the pin in the spindle.

5. Slide the tooling upward until it makes contact with the drawbar threads.
6. Hand thread the drawbar into the tooling until the tooling draws up into the spindle taper.
7. Use the included spindle pin to prevent the spindle from turning while you use an 8mm wrench to tighten the drawbar.

Note: Do not overtighten the drawbar. Overtightening makes collet removal difficult and will damage the drawbar threads, collet, and the spindle taper. Keep in mind that the taper keeps the collet and tool in place. The drawbar simply aids in seating the taper.

To remove the collet:

1. DISCONNECT MILL/DRILL FROM POWER!
2. Remove the drawbar cap.
3. Lock the quill in place with the quill lock lever.
4. Use the included spindle pin to prevent the spindle from turning while you use an 8mm wrench to loosen the drawbar 2–3 turns. DO NOT continue loosening the drawbar without supporting the collet or it will fall from the spindle.

LACERATION HAZARD!
Leading edges of end mills and other cutting tools can be very sharp. Protect your hands with gloves or a shop towel when handling.

CAUTION

The Model G0704 drawbar will extract the arbor from the spindle. Once the arbor or collet has broken free from the spindle taper, be sure to properly support it while continuing to loosen the drawbar. Failure to properly support the arbor or collet while loosening the drawbar will result in the arbor or collet falling out of the spindle, causing damage to machine components.

NOTICE

5. Protect the table surface with a piece of cardboard and hold the cutter/tool with a shop towel to prevent it from falling out of the collet. Continue loosening the drawbar until the collet is freed from the spindle.
Headstock Travel (Z-Axis and Rotation)

Headstock height is adjustable in the vertical Z-axis to accept large workpieces. For unique milling operations, the headstock can be tilted right or left between 0° and 90°.

To raise or lower the headstock:

1. Unlock the vertical travel lock levers shown in Figure 28.

   ![Figure 28. Headstock slide controls.](image)

2. Turn the vertical handwheel shown in Figure 28 to raise or lower the headstock, then lock the vertical travel lock levers.

   Note: For maximum spindle rigidity when milling, keep the spindle retracted into the headstock as far as possible with the quill lock lever locked and with the fine feed lock knob tightened.

To tilt the headstock to the left or right:

1. DISCONNECT MILL/DRILL FROM POWER.

   ![CAUTION]

   During the following steps, be aware that the headstock is top-heavy and will swing if it is not well supported once the center bolt and lock nut are loosened. Always support the headstock with one hand when loosening these fasteners. Failure to do so may result in unexpected movement of the headstock, causing damage to the machine and personal injury.

2. Support the headstock with one hand, then using the included 17/19mm combo wrench, loosen the headstock center bolt and three angle lock nuts (Figure 29).

   ![Figure 29. Headstock tilt controls.](image)

3. While watching the tilt scale, rotate the headstock to the required angle, then retighten the center bolt and angle lock nut to hold the headstock in place.
Table Travel

The mill/drill table can be moved in the longitudinal (X-axis) and cross (Y-axis) directions.

**Longitudinal Feed**
The X-axis is moved by the handwheels shown in Figure 30 at the end of the table. These handwheels will move the table in both directions side-to-side. One complete revolution of either handwheel moves the longitudinal feed 0.100”. There is also a scale on the front of the table for use when a tight tolerance is not required. The longitudinal feed can be locked in position by table locks located on the front of the table (see Figure 31).

**Cross Feed**
The Y-axis shown in Figure 30, is moved with the handwheel on the front of the table base. One complete revolution of the handwheel moves the cross slide 0.100”. The cross feed can be locked into position by a table lock lever located on the right side of the cross slide underneath the table (see Figure 31).
SECTION 5: ACCESSORIES

⚠️ WARNING
Installing unapproved accessories may cause machine to malfunction, resulting in serious personal injury or machine damage. To reduce this risk, only install accessories recommended for this machine by Grizzly.

NOTICE
Refer to our website or latest catalog for additional recommended accessories.

H8177—Worktable with Angle
Enjoy having an economical way to support your workpiece at an array of angles. This high-quality tilting worktable is quick and easy to setup and use.

Figure 33. Worktable with angle.

H8179—Horizontal Milling Table
Take advantage of the G0704 mill/drill 90° tilting headstock feature. Install this lifted cast-iron horizontal milling table for the correct clearance when making those side-milling operations.

Figure 32. Horizontal milling worktable.

G5684—R-8 Vertical Collet Rack
No more loose R-8 collets laying around in your tool box. Organize with this handy collet rack and you won’t be looking at each one for the correct size. Set on your bench or mount to a wall. Holds 48 collets.

Figure 34. Model G5684 Tilt Table.

order online at www.grizzly.com or call 1-800-523-4777

Model G0704 (Mfd. Since 05/16)
G9322—Boring Head Combo Set
Hardened and ground adjusting screws along with a wide base design guarantee a long life and trouble-free use. Includes a 2" boring head, R-8 arbor with 7/16"-20 TPI, and a 12 piece 3/4" boring bar set.

Figure 35. G9324 Boring Head Combo Set.

G9760—20-PC. 2 & 4 Flute TiN End Mill Set.

Figure 36. G9760 20-PC End Mill Set.

D2260A—Mini Shop Fox® Mobile Base
Don't let the little size of this one fool you. It shares the same design concepts as its two bigger brothers, giving you an amazing 600 lb. load capacity in one small package!

Figure 37. Model D2260A Mini Shop Fox® Mobile Base.

H5685—4" Rotary Table
The perfect rotary table for all you model makers and those doing smaller precision work. Comes with clamping kit.

Figure 38. H5685 4" Rotary Table.

T20451—“Kirova” Clear Safety Glasses
T20452—“Kirova” Anti-Reflective S. Glasses
H7194—Bifocal Safety Glasses 1.5
H7195—Bifocal Safety Glasses 2.0
H7196—Bifocal Safety Glasses 2.5

Figure 39. Assortment of basic eye protection.
**G9511—T-Slot Nuts, 4 PK, 7/16" Slot, 3/8"-16**
Heat treated steel T-Slot Nuts with black oxide finish feature an imperfect thread in the base of the T-nut to eliminate any danger of screwing the clamping stud through and damaging the table slot.

![Figure 40. Model G9511 T-Slot Nuts.](image)

**G5758—Tilt Table 5" x 7"**
Set your work at any angle with these sturdy tilt tables. Heavy-duty construction includes T-slots, two locking screws and precision base that allows the table to tilt from -45 Degrees to +45 Degrees. Table size: 5" x 7".

![Figure 41. Model G5758 Tilt Table.](image)

**G9849—Magnetic Base/Dial Indicator Combo**
Precision measurements and setups have never been so easy. Magnetic base engages with just the turn of a switch and allows pinpoint adjustment. The dial indicator features 0-1" travel and has a resolution of 0.001". This fine set includes a molded case for protection and convenience.

SECTION 6: MAINTENANCE

WARNING
Always disconnect power to the machine before performing maintenance. Failure to do this may result in serious personal injury.

Schedule

For optimum performance from your machine, follow this maintenance schedule and refer to any specific instructions given in this section.

Daily Check:
• Make sure mill/drill is disconnected from power when not in use.
• Check for loose mounting bolts.
• Make sure mill/drill is clean and lubricated.
• Check for worn or damaged wires.
• Check for any other unsafe condition.

Monthly Check:
• Check that gibs are adjusted properly.

Biannual Check:
• Lubricate headstock lead screw and gears.

Lubrication

Regular lubrication will ensure your mill/drill performs at its highest potential. Regularly wipe all sliding surfaces with SB1365 Way Oil (Page 35) or a light machine oil, then move the components back and forth several times to ensure smooth movements (Figures 44–46). Every six months, or more often with heavy use, clean and lubricate the leadscrews and vertical handwheel ring & pinion gears, as outlined on Page 38.

Protect other unpainted cast iron surfaces with regular applications of products like G96® Gun Treatment, SLIPIT®, or Boeshield® T-9.
Tools Needed:  

<table>
<thead>
<tr>
<th>Tool</th>
<th>Qty</th>
</tr>
</thead>
<tbody>
<tr>
<td>Hex Wrench 3, 4mm</td>
<td>1</td>
</tr>
<tr>
<td>Multi-Purpose Lithium Grease</td>

<td>As needed for cleaning</td>
</tr>
<tr>
<td>Shop Rags</td>
<td>As needed for cleaning</td>
</tr>
</tbody>
</table>

To lubricate the leadscrews:

1. DISCONNECT MILL/DRILL FROM POWER!

2. Lower the headstock as far as you can without the spindle contacting the table surface.

3. Use mineral spirits and a brush to clean as much of the existing grease and debris as possible off of the vertical leadscrew shown in Figure 47. Allow leadscrew to dry.

4. Apply light machine oil to the exposed leadscrew threads, then move the headstock through its full range of motion several times to disperse the oil along the full length of the leadscrew.

5. Using the cross handwheel, move the table as far forward as possible.

6. Lift or remove the rubber way cover, then use mineral spirits and a brush to clean as much of the existing grease and debris as possible off of the cross travel leadscrew shown in Figure 48. Allow leadscrew to dry.

7. Apply light machine oil to the exposed leadscrew threads, then move the table through its full range of cross motion several times to disperse the oil along the full length of the leadscrew.

8. Using the longitudinal handwheel, move the table as far to one side as possible.

9. From beneath the table, use mineral spirits and a brush to clean as much of the existing grease and debris as possible off of the longitudinal travel leadscrew shown in Figure 49. Allow the leadscrew to dry.

10. Apply light machine oil to the exposed leadscrew threads, then move the table through its full range of longitudinal motion several times to disperse the oil along the full length of the leadscrew.
To lubricate the vertical leadscrew bushing and ring & pinion gears:

1. DISCONNECT MILL/DRILL FROM POWER!

2. Remove the bushing cap by unthreading the four cap screws that secure it (Figure 50).

3. Apply several drops of light machine oil to the bushing edge, then rotate the vertical handwheel to disperse the oil (Figure 51).

4. Replace the bushing cap.

5. Remove the acorn nut and flat washer that secure the vertical handwheel, then remove the handwheel (Figure 52).

6. Remove the four cap screws that secure the handwheel shaft pillow block, then carefully remove the assembly (Figure 53).

7. Use mineral spirits and a brush and rag to clean as much of the existing grease and debris as possible off of the ring and pinion gears. Allow the parts to dry.

8. Apply a liberal coat of multi-purpose grease to the pinion gear.

9. Re-assemble the machine by reversing the steps above.
SECTION 7: SERVICE

Review the troubleshooting and procedures in this section if a problem develops with your machine. If you need replacement parts or additional help with a procedure, call our Technical Support at (570) 546-9663. 

Note: Please gather the serial number and manufacture date of your machine before calling.

Troubleshooting

<table>
<thead>
<tr>
<th>Symptom</th>
<th>Possible Cause</th>
<th>Possible Solution</th>
</tr>
</thead>
<tbody>
<tr>
<td>Machine does not start.</td>
<td>1. Fuse on machine blown. 2. Plug at fault or wired incorrectly. 3. Motor wired incorrectly. 4. Wall fuse/circuit breaker is blown/tripped. 5. Wiring is open/has high resistance. 6. Machine power switch is at fault. 7. Motor is at fault.</td>
<td>1. Replace blown fuse. 2. Ensure plug is not damaged and is wired correctly. 3. Ensure motor wiring is correct. 4. Ensure circuit size is correct and a short does not exist. Reset breaker or replace fuse. 5. Check for broken wires or disconnected/corroded connections; repair/replace as necessary. 6. Ensure switch is wired correctly; replace if at fault. 7. Test/repair/replace.</td>
</tr>
<tr>
<td>Machine stalls or is overloaded.</td>
<td>1. Feed rate/cutting speed too fast. 2. Wrong cutter type. 3. Machine is undersized for the task or tooling is incorrect for the task. 4. Motor connection is wired incorrectly. 5. Motor bearings are at fault. 6. Motor has overheated. 7. Motor is at fault.</td>
<td>1. Decrease feed rate/cutting speed. 2. Use the correct cutter for the task. 3. Use smaller or sharper tooling; reduce feed rate or spindle speed; use cutting fluid if possible. 4. Wire motor correctly for the intended voltage. 5. Test by rotating shaft; rotational grinding/loose shaft requires bearing replacement. 6. Clean off motor, let cool, and reduce workload. 7. Test/repair/replace motor.</td>
</tr>
<tr>
<td>Machine has vibration or noisy operation.</td>
<td>1. Motor or machine component is loose. 2. Excessive depth of cut. 3. Cutter/tooling is loose. 4. Cutter is dull or at fault. 5. Bit is chattering. 6. Machine is incorrectly mounted or sits unevenly. 7. Motor bearings are at fault.</td>
<td>1. Inspect/replace stripped or damaged bolts/nuts, and re-tighten with thread locking fluid. 2. Decrease depth of cut. 3. Make sure tooling is properly secured. 4. Replace/resharpen cutter. 5. Replace/sharpen bit; index bit to workpiece; use appropriate feed rate and cutting RPM. 6. Tighten/replace mounting bolts in bench; relocate/shim machine. 7. Test by rotating shaft; rotational grinding/loose shaft requires bearing replacement.</td>
</tr>
<tr>
<td>Symptom</td>
<td>Possible Cause</td>
<td>Possible Solution</td>
</tr>
<tr>
<td>-------------------------------------------</td>
<td>-------------------------------------------------------------------------------</td>
<td>------------------------------------------------------------------------------------</td>
</tr>
<tr>
<td>Tool slips in collet.</td>
<td>1. Collet is not fully drawn up into spindle taper.</td>
<td>1. Tighten drawbar.</td>
</tr>
<tr>
<td></td>
<td>2. Wrong size collet.</td>
<td>2. Measure tool shank diameter and match with appropriate diameter collet.</td>
</tr>
<tr>
<td></td>
<td>3. Debris on collet or in spindle taper.</td>
<td>3. Clean collet and spindle taper.</td>
</tr>
<tr>
<td></td>
<td>4. Taking too big of a cut.</td>
<td>4. Lessen depth of cut and allow chips to clear.</td>
</tr>
<tr>
<td>Breaking tools or cutters.</td>
<td>1. Spindle speed too slow/feed rate is too fast.</td>
<td>1. Set spindle speed correctly ((\text{Page 27})) or use a slower feed rate.</td>
</tr>
<tr>
<td></td>
<td>2. Cutting tool getting too hot.</td>
<td>2. Use coolant fluid or oil for appropriate application.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>(Follow cutting fluid manufacturer's recommendation for proper use and safety.)</td>
</tr>
<tr>
<td></td>
<td>3. Taking too big of a cut.</td>
<td>3. Decrease depth of cut.</td>
</tr>
<tr>
<td></td>
<td>4. Spindle extended too far down.</td>
<td>4. Fully retract spindle and lower headstock. This increases rigidity.</td>
</tr>
<tr>
<td>Workpiece vibrates or chatters during operation.</td>
<td>1. Table locks not tight.</td>
<td>1. Tighten down table locks ((\text{Page 32})).</td>
</tr>
<tr>
<td></td>
<td>2. Quill lock lever not tight.</td>
<td>2. Tighten quill lock lever.</td>
</tr>
<tr>
<td></td>
<td>3. Workpiece not securely clamped to table or into mill vice.</td>
<td>3. Check that clamping is tight and sufficient for the job.</td>
</tr>
<tr>
<td></td>
<td>4. Spindle speed is too slow/feed rate is too fast.</td>
<td>Make sure mill vice is tight to the table.</td>
</tr>
<tr>
<td></td>
<td>5. Spindle extended too far down.</td>
<td>4. Set spindle speed correctly ((\text{Page 27})) or use a slower feed rate.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>5. Fully retract spindle and lower headstock. This increases rigidity.</td>
</tr>
<tr>
<td>Table is hard to move.</td>
<td>1. Table locks are tightened down.</td>
<td>1. Make sure table locks are fully released.</td>
</tr>
<tr>
<td></td>
<td>2. Chips have loaded up on ways.</td>
<td>2. Frequently clean away chips that load up during milling operations.</td>
</tr>
<tr>
<td></td>
<td>3. Ways are dry and need lubrication.</td>
<td>3. Lubricate ways and handles ((\text{Page 36})).</td>
</tr>
<tr>
<td></td>
<td>4. Table limit stops are interfering.</td>
<td>4. Check to make sure that all table limit stops are not in the way.</td>
</tr>
<tr>
<td></td>
<td>5. Gibs are too tight.</td>
<td>5. Adjust gibs ((\text{see Page 41})).</td>
</tr>
<tr>
<td>Bad surface finish.</td>
<td>1. Spindle speed is too slow/feed rate is too fast.</td>
<td>1. Set spindle speed correctly ((\text{Page 27})) or use a slower feed rate.</td>
</tr>
<tr>
<td></td>
<td>2. Using a dull or incorrect cutting tool.</td>
<td>2. Sharpen cutting tool or select one that better suits the operation.</td>
</tr>
<tr>
<td></td>
<td>3. Wrong rotation of cutting tool.</td>
<td>3. Check for proper cutting rotation for cutting tool.</td>
</tr>
<tr>
<td></td>
<td>4. Workpiece not securely clamped.</td>
<td>4. Secure properly to the table.</td>
</tr>
<tr>
<td></td>
<td>5. Spindle extended too far down.</td>
<td>5. Fully retract spindle and lower headstock. This increases rigidity.</td>
</tr>
</tbody>
</table>
Gibs

Gibs are wedge-shaped pieces of metal that fill the gap between the sliding surfaces of the machine. By adjusting the position of the gib in its gap, you can remove any play that might exist between the adjacent components. The gibs are pre-adjusted at the factory but due to storage, break-in, and usage, may require adjustment. If movement seems too tight at first, make sure that all the rust preventative that was shipped on the machine is removed from the ways. Lubricate the ways with oil, and work the table back-and-forth several times until the movement is easier.

To adjust the table gibs:

1. DISCONNECT MILL/DRILL FROM POWER!

2. Loosen the table travel locks (Figure 54).

3. Loosen or tighten the front and rear gib screws (Figure 54) in an alternating manner to adjust the cross travel gib.

   The table should slide smoothly in the cross direction with no play or looseness. Do not overtighten the gibs or premature slide and gib wear will occur.

4. Lubricate the cross way and gib.

5. Repeat the process for the longitudinal way gib using the gib adjustment screws on the left and right sides of the table base.

To adjust the headstock gibs:

1. DISCONNECT MILL/DRILL FROM POWER!

2. Remove the two screws that secure the top end of the way cover, pull it down to expose the lower gib screw, then loosen the vertical travel locks (Figure 55).

3. Loosen or tighten the upper and lower gib screws (Figure 55) in an alternating manner to adjust the headstock gib.

   The headstock should slide smoothly with no play or looseness. Do not overtighten the gibs or premature slide and gib wear will occur.

4. Lubricate the headstock way and gib.

5. Re-install the way cover.

**Leadscrew Backlash**

When you turn the handwheels to adjust the position of the table, you will notice slight play (backlash) in the handwheel before the table begins to move. If this play is greater than 0.008" (measured with the dial at the base of each handwheel), then you will need to adjust the leadscrew nuts.

To reach the adjustment screws on the leadscrew nut, you may have to fabricate extensions for your hex wrenches. When adjusting, make adjustments in small increments. Attempting to reduce backlash to less than 0.003" is impractical and will add unnecessary wear to both the leadscrews and the leadscrew nuts.

**To adjust the X-axis leadscrew:**

1. Locate the X-axis leadscrew nut under the middle of the table. The head on the adjustment screws face to the right (Figure 56).

2. Tighten the adjustment screws.

3. Test the adjustment by turning one of the longitudinal handwheels. The ideal amount of play when properly adjusted is 0.003"–0.006".

**To adjust the Y-axis leadscrew nut:**

1. Locate the leadscrew nut underneath the table through the hole in the base under the rubber way cover.

2. Tighten the adjustment screws on the leadscrew nut in the same manner as described for the X-axis leadscrew adjustment.

3. Test the adjustment by turning one of the cross handwheels. The ideal amount of play when properly adjusted is 0.003"–0.006".

---

**Digital Readout Unit Battery Replacement**

If the digital readout unit stops functioning, the battery must be replaced.

**To replace the digital readout unit battery:**

1. Use a wide (#3) standard screwdriver or the edge of a coin to remove the battery cover (Figure 57).

2. Remove the old battery, dispose of it according to state and federal regulations, then replace it with a new one.

3. Replace the battery cover.
**Motor Service**

The bearings inside the motor are shielded and lubricated for the life of the bearing and require no routine maintenance.

This motor is equipped with long life carbon brushes. Brush life expectancy is affected by motor loading. Heavy motor loading will result in reduced brush life. If you notice a loss in power or if the motor becomes excessively noisy, inspect the brushes. If the brushes are worn down to ¼” (6mm) or less, it is time to replace them. When checking brushes, be sure to return each brush to the same hole in the same direction that it came from. When replacing old brushes, replace both brushes at the same time.

**Tools Needed:**

<table>
<thead>
<tr>
<th>Tool</th>
<th>Qty</th>
</tr>
</thead>
<tbody>
<tr>
<td>Hex Wrench 3mm</td>
<td>1</td>
</tr>
<tr>
<td>Standard Screwdriver #2</td>
<td>1</td>
</tr>
</tbody>
</table>

To inspect and replace the motor brushes:

1. **DISCONNECT MILL/DRILL FROM POWER!**

2. Un-install the motor cover by removing the four cap screws that secure it (Figure 58).

3. Unscrew one of the brush caps to expose the brush assembly (Figure 59).

4. Remove the old brush assembly. If the brush is worn down to less than ¼” (6mm) then replace it with a new one. Otherwise re-install the brush (Figure 60).

5. Replace the brush cap to secure the brush in place.

6. Repeat for second brush assembly on the other side of the motor.
SECTION 8: WIRING

These pages are current at the time of printing. However, in the spirit of improvement, we may make changes to the electrical systems of future machines. Compare the manufacture date of your machine to the one stated in this manual, and study this section carefully.

If there are differences between your machine and what is shown in this section, call Technical Support at (570) 546-9663 for assistance BEFORE making any changes to the wiring on your machine. An updated wiring diagram may be available. **Note:** Please gather the serial number and manufacture date of your machine before calling. This information can be found on the main machine label.

---

**WARNING**

**Wiring Safety Instructions**

**SHOCK HAZARD.** Working on wiring that is connected to a power source is extremely dangerous. Touching electrified parts will result in personal injury including but not limited to severe burns, electrocution, or death. Disconnect the power from the machine before servicing electrical components!

**MODIFICATIONS.** Modifying the wiring beyond what is shown in the diagram may lead to unpredictable results, including serious injury or fire. This includes the installation of unapproved aftermarket parts.

**WIRE CONNECTIONS.** All connections must be tight to prevent wires from loosening during machine operation. Double-check all wires disconnected or connected during any wiring task to ensure tight connections.

**CIRCUIT REQUIREMENTS.** You MUST follow the requirements at the beginning of this manual when connecting your machine to a power source.

**WIRE/COMPONENT DAMAGE.** Damaged wires or components increase the risk of serious personal injury, fire, or machine damage. If you notice that any wires or components are damaged while performing a wiring task, replace those wires or components.

**MOTOR WIRING.** The motor wiring shown in these diagrams is current at the time of printing but may not match your machine. If you find this to be the case, use the wiring diagram inside the motor junction box.

**CAPACITORS/INVERTERS.** Some capacitors and power inverters store an electrical charge for up to 10 minutes after being disconnected from the power source. To reduce the risk of being shocked, wait at least this long before working on capacitors.

**EXPERIENCING DIFFICULTIES.** If you are experiencing difficulties understanding the information included in this section, contact our Technical Support at (570) 546-9663.

### WARNING

Safety labels warn about machine hazards and ways to prevent injury. The owner of this machine MUST maintain the original location and readability of the labels on the machine. If any label is removed or becomes unreadable, REPLACE that label before using the machine again. Contact Grizzly at (800) 523-4777 or www.grizzly.com to order new labels.
The following information is given on a voluntary basis. It will be used for marketing purposes to help us develop better products and services. Of course, all information is strictly confidential.

1. How did you learn about us?
   ___ Advertisement   ___ Friend   ___ Catalog
   ___ Card Deck   ___ Website   ___ Other:

2. Which of the following magazines do you subscribe to?
   ___ Cabinetmaker & FDM   ___ Popular Science   ___ Wooden Boat
   ___ Family Handyman   ___ Popular Woodworking   ___ Woodshop News
   ___ Hand Loader   ___ Precision Shooter   ___ Woodsmith
   ___ Handy   ___ Projects in Metal   ___ Woodwork
   ___ Home Shop Machinist   ___ RC Modeler   ___ Woodworker West
   ___ Journal of Light Cont.   ___ Rifle   ___ Woodworker’s Journal
   ___ Live Steam   ___ Shop Notes   ___ Other:
   ___ Model Airplane News   ___ Shotgun News
   ___ Old House Journal   ___ Today’s Homeowner
   ___ Popular Mechanics   ___ Wood

3. What is your annual household income?
   ___ $20,000-$29,000   ___ $30,000-$39,000   ___ $40,000-$49,000
   ___ $50,000-$59,000   ___ $60,000-$69,000   ___ $70,000+

4. What is your age group?
   ___ 20-29   ___ 30-39   ___ 40-49
   ___ 50-59   ___ 60-69   ___ 70+

TAPE ALONG EDGES--PLEASE DO NOT STAPLE
Grizzly Industrial, Inc. warrants every product it sells for a period of 1 year to the original purchaser from the date of purchase. This warranty does not apply to defects due directly or indirectly to misuse, abuse, negligence, accidents, repairs or alterations or lack of maintenance. This is Grizzly's sole written warranty and any and all warranties that may be implied by law, including any merchantability or fitness, for any particular purpose, are hereby limited to the duration of this written warranty. We do not warrant or represent that the merchandise complies with the provisions of any law or acts unless the manufacturer so warrants. In no event shall Grizzly’s liability under this warranty exceed the purchase price paid for the product and any legal actions brought against Grizzly shall be tried in the State of Washington, County of Whatcom.

We shall in no event be liable for death, injuries to persons or property or for incidental, contingent, special, or consequential damages arising from the use of our products.

To take advantage of this warranty, contact us by mail or phone and give us all the details. We will then issue you a “Return Number,” which must be clearly posted on the outside as well as the inside of the carton. We will not accept any item back without this number. Proof of purchase must accompany the merchandise.

The manufacturers reserve the right to change specifications at any time because they constantly strive to achieve better quality equipment. We make every effort to ensure that our products meet high quality and durability standards and we hope you never need to use this warranty.

Please feel free to write or call us if you have any questions about the machine or the manual.

Thank you again for your business and continued support. We hope to serve you again soon.
