

G3244 and G3245 Step Drill Bits

The G3244 and G3245 Step Drill Bits are designed specifically for use with our G3243 Pocket Hole Guide and G1950 Stop Collar Set. These Step Drill Bits allow you to drill the pilot hole and counter bore for pocket-hole face frame assembly without changing drill bits.

Although our drill bits are manufactured using the highest quality drill bit steel and craftsmanship, care must be used when handling and using these bits. Keep in mind that, although they come with a solid $\frac{3}{8}$ " shank, they still must be treated as a $\frac{9}{64}$ " bit as the diameter is small and can break when misused. Also, when using in combination with the Pocket Hole Guide, multiple steps should be used to unload the flutes of all material. Avoid drilling in knots as this can also cause the bit to break, rendering the tool useless.

Caution: Drill Bits are sharp and can cause injury if not properly handled. Care should be used when placing bit in Drill. Always disconnect power source when handling the drill bit. Always wear eye and hearing protection when in use.
