MODEL H8375
PORTABLE FUME EXTRACTOR
OWNER'S MANUAL

COPYRIGHT © APRIL, 2008 BY GRIZZLY INDUSTRIAL, INC.
WARNING: NO PORTION OF THIS MANUAL MAY BE REPRODUCED IN ANY SHAPE OR FORM WITHOUT THE WRITTEN APPROVAL OF GRIZZLY INDUSTRIAL, INC.
#CR10480 PRINTED IN TAIWAN
This manual provides critical safety instructions on the proper setup, operation, maintenance, and service of this machine/tool. Save this document, refer to it often, and use it to instruct other operators.

Failure to read, understand and follow the instructions in this manual may result in fire or serious personal injury—including amputation, electrocution, or death.

The owner of this machine/tool is solely responsible for its safe use. This responsibility includes but is not limited to proper installation in a safe environment, personnel training and usage authorization, proper inspection and maintenance, manual availability and comprehension, application of safety devices, cutting/sanding/grinding tool integrity, and the usage of personal protective equipment.

The manufacturer will not be held liable for injury or property damage from negligence, improper training, machine modifications or misuse.

Some dust created by power sanding, sawing, grinding, drilling, and other construction activities contains chemicals known to the State of California to cause cancer, birth defects or other reproductive harm. Some examples of these chemicals are:

- Lead from lead-based paints.
- Crystalline silica from bricks, cement and other masonry products.
- Arsenic and chromium from chemically-treated lumber.

Your risk from these exposures varies, depending on how often you do this type of work. To reduce your exposure to these chemicals: Work in a well ventilated area, and work with approved safety equipment, such as those dust masks that are specially designed to filter out microscopic particles.

H8375 Portable Fume Extractor
INTRODUCTION

Foreword

We are proud to offer the Model H8375 Portable Fume Extractor. This machine is part of a growing Grizzly family of fine metalworking machinery. When used according to the guidelines set forth in this manual, you can expect years of trouble-free, enjoyable operation and proof of Grizzly’s commitment to customer satisfaction.

The specifications, drawings, and photographs illustrated in this manual represent the Model H8375 when the manual was prepared. However, owing to Grizzly’s policy of continuous improvement, changes may be made at any time with no obligation on the part of Grizzly.

For your convenience, we always keep current Grizzly manuals available on our website at www.grizzly.com. Any updates to your machine will be reflected in these manuals as soon as they are complete. Visit our site often to check for the latest updates to this manual!

Functional Overview

This portable fume extractor helps collect and recycle shop air that is contaminated with welding dust, oily smoke, and fumes. However, it is not designed to be the "single-solution" air cleaner and should not substitute respirator or fresh-air type respirator use. Often metals have coatings that produce very poisonous fumes when heated, so make sure that you are familiar with the types of fumes produced by the material that you are welding. Keep your shop in compliance with OSHA welding safety requirements at all times.

The Model H8375 can be permanently connected to a small welding downdraft table or moved to various welding locations. Two squirrel-cage fans are located inside of the cabinet and draw welding dust, smoke, and fumes through the suction hood and then through a series of filters before the air re-enters the shop. This filtration occurs in the following five stages:

Stage 1
Contaminated air enters the machine through a slag catch tray, and then through a 1-2mm stainless steel screen that arrests sparks, and collects minor welding slag.

Stage 2
Considered the first consumable pleated filter, this filter collects 35% of the 2-10 micron welding dust and most of the oily smoke.

Stage 3
The second consumable pleated filter catches 85% of the 1-2 micron dust and the remaining oily smoke.

Stage 4
This serviceable-type pleated filter, catches 45% of the 1-micron size particles.

Stage 5
This HEPA filter catches 99.97% of the 0.3-micron dust particles before the recycled air finally exits the machine and reenters the shop.

Contact Info

We stand behind our machines. If you have any service questions, parts requests or general questions about the machine, please call or write us at the location listed below.

MODEL H8375
PORTABLE FUME EXTRACTOR

Product Dimensions:
- Weight: 46 lbs
- Length/Width/Height: 24½" x 14" x 19"
- Foot Print (Length/Width): 24½" x 14"

Shipping Dimensions:
- Type: Cardboard
- Content: Machine
- Weight: 49 lbs.
- Length/Width/Height: 27½° x 18¾" x 20½"

Electrical:
- Switch: Rubber Enclosed Rocker Switch
- Switch Voltage: 110V
- Cord Length: 9 ft.
- Cord Gauge: 14 gauge
- Minimum Circuit Size: 20 AMP
- Included Plug: Yes

Motors:
- Main
  - Quantity: 2
  - Type: Universal
  - Horsepower: 1HP
  - Voltage: 110V
  - Phase: Single
  - Amps: 15A
  - Speed: 19,000 RPM
  - Cycle: 60 Hz
  - Number of Speeds: 1
  - Power Transfer: Direct Drive

Main Specifications:
- Cubic Feet Per Minute: 230
- Intake Diameter: 2½"
- Filter Stage 1 Type/Micron: Stainless Mesh/1-2mm
- Filter Stage 1 Dimensions: 13½" x 12"
- Filter Stage 2 Type/Micron: Prefilter/2-10 Micron
- Filter Stage 2 Dimensions: 12" x 12" x 2"
- Filter Stage 3 Type/Micron: Prefilter/1-2 Micron
- Filter Stage 3 Dimensions: 12" x 12" x 2"
- Filter Stage 4 Type/Micron: Pleated Filter/1 Micron
- Filter Stage 4 Dimensions: 12" x 12" x 4"
- Filter Stage 5 Type/Micron: HEPA Filter/0.3 Micron
- Filter Stage 5 Dimensions: 12" x 12" x 3"
- Impeller Type: Aluminum
- Impeller Size: 5"
- Outlet Size: 8½" x 2½"
Construction

- Body Construction: Steel
- Hood and Support Construction: Steel
- Flex Hose Construction: PVC
- Work Area Flex Hose Construction: Fire Resistant PVC
- Paint: Epoxy/Powder Coat

Other Specifications:

- Country Of Origin: Taiwan
- Warranty: 1 Year
- Serial Number Location: ID Label on Top of the Machine

Features:

- Five Stage Filter System
- Service Filter Warning Light
- 8' Flex Hose
- 21" Work Area Flex Hose
- 2½" x 10" Hood
- Adjustable Hood Support With Magnetic and Clamp-on Bases
Identification

A. **Motor and Fan Access Cover**: Allows for motor, fan, and electrical system access.

B. **Lifting Handle**: Serves as a steady support for lifting and transporting unit.

C. **Power Switch**: Controls machine operation.

D. **PVC Suction Hose**: A very flexible hose for easy suction hood positioning.

E. **Suction Hood**: Directs suction to specific welding location.

F. **Suction Hood Height Lock Knob**: Locks suction hood in place at a particular height above the workpiece.

G. **Suction Hood Support System**: Allows for universal positioning of the suction hood.

H. **Suction Hood Lock Lever**: Locks suction hood into a specific position.

I. **Suction hood Rotation Lock Knob**: Allows for locking the suction hood support system in place after rotating it.

J. **Magnetic Suction Hood Support Base**: Allows for magnetic mounting of suction hood system.

K. **Fire Resistant Hose**: Gives fire protection while located in welding work area.

L. **Rubber Feet**: Provides for non-scratching positioning of the unit, and dampens any machine vibration.

M. **Service Cover**: Allows access to screen and filters for maintenance.

N. **Quick Service Latch**: Allows for quick and easy screen and filter access.
SECTION 1: SAFETY

⚠️ WARNING

For Your Own Safety, Read Instruction Manual Before Operating this Machine

The purpose of safety symbols is to attract your attention to possible hazardous conditions. This manual uses a series of symbols and signal words intended to convey the level of importance of the safety messages. The progression of symbols is described below. Remember that safety messages by themselves do not eliminate danger and are not a substitute for proper accident prevention measures.

⚠️ DANGER
Indicates an imminently hazardous situation which, if not avoided, WILL result in death or serious injury.

⚠️ WARNING
Indicates a potentially hazardous situation which, if not avoided, COULD result in death or serious injury.

⚠️ CAUTION
Indicates a potentially hazardous situation which, if not avoided, MAY result in minor or moderate injury. It may also be used to alert against unsafe practices.

NOTICE
This symbol is used to alert the user to useful information about proper operation of the machine.

⚠️ WARNING

Safety Instructions for Machinery

1. READ ENTIRE MANUAL BEFORE STARTING. Operating machine before reading the manual greatly increases the risk of injury.

2. ALWAYS USE ANSI APPROVED SAFETY GLASSES WHEN OPERATING MACHINERY. Everyday eyeglasses only have impact resistant lenses—they are NOT safety glasses.

3. ALWAYS WEAR A NIOSH APPROVED RESPIRATOR WHEN OPERATING MACHINERY THAT PRODUCES DUST. Most types of dust (wood, metal, etc.) can cause severe respiratory illnesses.

4. ALWAYS USE HEARING PROTECTION WHEN OPERATING MACHINERY. Machinery noise can cause permanent hearing loss.

5. WEAR PROPER APPAREL. DO NOT wear loose clothing, gloves, neckties, rings, or jewelry that can catch in moving parts. Wear protective hair covering to contain long hair and wear non-slip footwear.

6. NEVER OPERATE MACHINERY WHEN TIRED OR UNDER THE INFLUENCE OF DRUGS OR ALCOHOL. Be mentally alert at all times when running machinery.
**WARNING**

Safety Instructions for Machinery

7. **ONLY ALLOW TRAINED AND PROPERLY SUPERVISED PERSONNEL TO OPERATE MACHINERY.** Make sure operation instructions are safe and clearly understood.

8. **KEEP CHILDREN/VISITORS AWAY.** Keep all children and visitors away from machinery. When machine is not in use, disconnect it from power, lock it out, or disable the switch to make it difficult for unauthorized people to start the machine.

9. **UNATTENDED OPERATION.** Leaving machine unattended while its running greatly increases the risk of an accident or property damage. Turn machine **OFF** and allow all moving parts to come to a complete stop before walking away.

10. **DO NOT USE IN DANGEROUS ENVIRONMENTS.** DO NOT use machinery in damp, wet locations, or where any flammable or noxious fumes may exist.

11. **KEEP WORK AREA CLEAN AND WELL LIGHTED.** Clutter and dark shadows may cause accidents.

12. **USE A GROUNDED POWER SUPPLY RATED FOR THE MACHINE AMPERAGE.** Grounded cords minimize shock hazards. Operating machine on an incorrect size of circuit increases risk of fire.

13. **ALWAYS DISCONNECT FROM POWER SOURCE BEFORE SERVICING MACHINERY.** Make sure switch is in OFF position before reconnecting.

14. **MAINTAIN MACHINERY WITH CARE.** Keep blades sharp and clean for best and safest performance. Follow instructions for lubricating and changing accessories.

15. **MAKE SURE GUARDS ARE IN PLACE AND WORK CORRECTLY BEFORE USING MACHINERY.**

16. **REMOVE CHUCK KEYS OR ADJUSTING TOOLS.** Make a habit of never leaving chuck keys or other adjustment tools in/on the machine—especially near spindles!

17. **DAMAGED MACHINERY.** Check for binding or misaligned parts, broken parts, loose bolts, other conditions that may impair machine operation. Always repair or replace damaged parts before operation.

18. **DO NOT FORCE MACHINERY.** Work at the speed for which the machine or accessory was designed.

19. **SECURE WORKPIECE.** Use clamps or a vise to hold the workpiece when practical. A secured workpiece protects your hands and frees both hands to operate the machine.

20. **DO NOT OVERREACH.** Maintain stability and balance at all times when operating machine.

21. **MANY MACHINES CAN EJECT WORKPIECES TOWARD OPERATOR.** Know and avoid conditions that cause the workpiece to "kickback."

22. **STABLE MACHINE.** Machines that move during operations greatly increase the risk of injury and loss of control. Verify machines are stable/secure and mobile bases (if used) are locked before starting.

23. **CERTAIN DUST MAY BE HAZARDOUS to the respiratory systems of people and animals, especially fine dust.** Be aware of the type of dust you are exposed to and always wear a respirator designed to filter that type of dust.

24. **EXPERIENCING DIFFICULTIES.** If at any time you are experiencing difficulties performing the intended operation, stop using the machine! Contact our Technical Support Department at (570) 546-9663.
WARNING
Safety Instructions for Fume Extractors

1. WELDING FUMES. Welding fumes are hazardous and can cause lung damage without warning. Keep your face away from welding fumes, and position the suction hood near the arc to draw in all fumes from your workstation breathing area. Use an ANSI approved respirator for the applicable type of welding operation, and protect others from these fumes.

2. WELDING IN A CONFINED SPACE CAN BE HAZARDOUS. Do not use this fume extractor in confined spaces without adequate ventilation. Fume extractors do not replace oxygen that is consumed by welding and cutting operations. Suffocation can occur if this warning is ignored. Always open all covers, doors, and windows to sustain fresh air ventilation. Wear an air line respirator, and always work with a partner who can immediately give you help from outside of the welding area.

3. CORRECT FILTRATION. Never modify this fume extractor for any other purpose than it was designed for. Only operate the fume extractor with all filters in place. If any filter is missing or has been replaced with a non-specification filter, the fume extractor will not properly recycle contaminated air and will be unsafe to use.

4. EQUIPMENT MAINTENANCE. Make sure equipment inspections and maintenance are performed by a qualified person and keep all seals and gaskets leak free. Stop the welding operation if the fume extractor is leaking or malfunctions. Repair the fume extractor before using again.

5. FILTER CLEANING/DISPOSAL. When servicing filters, make sure that you and any bystanders are wearing appropriate respirators and body protection. When vacuuming filters and cabinet, only use a shop vacuum that is equipped with a HEPA filter, or dangerous particles may be spread throughout your shop contaminating the air for everyone. Wrap all waste filters in air-tight plastic bags, mark and dispose of according to current laws and regulations.

6. CORRECT USAGE. Never use this fume collector to collect burning slag or molten metal from cutting and welding operations. Always position the suction hood to only collect smoke and fumes.

7. EXPERIENCING DIFFICULTIES. Keep in mind that all normal welding hazards are intensified in a confined space. If you are experiencing difficulties performing the intended operation, stop using the equipment. Contact our Technical Support Department at (570) 546-9663.

WARNING
Like all machinery there is potential danger when operating this machine. Accidents are frequently caused by lack of familiarity or failure to pay attention. Use this machine with respect and caution to lessen the possibility of operator injury. If normal safety precautions are overlooked or ignored, serious personal injury may occur.

CAUTION
No list of safety guidelines can be complete. Every shop environment is different. Always consider safety first, as it applies to your individual working conditions. Use this and other machinery with caution and respect. Failure to do so could result in serious personal injury, damage to equipment, or poor work results.
Welding, cutting, brazing, or soldering of metals can give off poisonous fumes containing zinc, lead, beryllium, cadmium, mercury, fluorine, and hexavalent chromium and others. These fumes typically originate from fluxes, solders, anti-corrosion coatings, pigments, metal fillers, and residual chemicals on the workpiece. This machine is designed to help meet the new welding shop clean air requirements mandated by OSHA beginning in 2006. The Model H8375 Portable Fume Extractor is designed to be a part of an overall fume control system. It is NOT designed to serve as a “single-solution” for keeping workers safe from all welding fumes. You must contact OSHA to find out how to design and maintain the best overall welding fume control system for your work station or shop. Often, depending on the workspace size, volume of work, type of material to be welded, or other special circumstances, you must use additional safety equipment such as personal air line respirators, hoods, masks, and complete body protection.

Contact the organizations below to help you meet welding fume extraction requirements:

**Occupational Safety and Health Administration (OSHA).**

**American Welding Society (AWS).**

**American National Standards Institute (ANSI).**

**National Institute for Occupational Safety and Health (NIOSH).**

**International Agency For Research On Cancer (IARC).**

**National Fire Protection Association (NFPA),** P. O. Box 9101, 1 Battery March Park, Quincy, MA 02269-9101, (617) 770-3000, Website: www.nfpa.org and www.sparky.org.
—National Electrical Code, NFPA Standard 70
—Standard for Fire Prevention During Welding, Cutting, and Other Hot Work, NFPA Standard 51B

**American Conference of Governmental Industrial Hygienists (ACGIH).**
SECTION 2: CIRCUIT REQUIREMENTS

110V Operation

**WARNING**
Serious personal injury could occur if you connect the machine to power before completing the setup process. DO NOT connect the machine to the power until instructed later in this manual.

**WARNING**
Electrocution or fire could result if machine is not grounded and installed in compliance with electrical codes. Compliance MUST be verified by a qualified electrician!

Full Load Amperage Draw
The dual motors of this machine draw the following amps under maximum load:
Amp Draw.............................................. 15 Amps

Power Supply Circuit Requirements
You MUST connect your machine to a grounded circuit that is rated for the amperage given below. Never replace a circuit breaker on an existing circuit with one of higher amperage without consulting a qualified electrician to ensure compliance with wiring codes. **If you are unsure about the wiring codes in your area or you plan to connect your machine to a shared circuit, consult a qualified electrician.**

Minimum Circuit Size................................. 20 Amps

Power Connection Device
The Model H8375 comes with a 5-15 plug, similar to **Figure 2**, to connect the machine to power.

**CAUTION**
This machine MUST have a ground prong in the plug to help ensure that it is grounded. **DO NOT remove ground prong from plug to fit into a two-pronged outlet! If the plug will not fit the outlet, have the proper outlet installed by a qualified electrician.**

Extension Cords
We do not recommend using extension cords, but if you find it absolutely necessary:

- Use at least a 12 gauge cord that does not exceed 50 feet in length!
- The extension cord must have a ground wire and plug pin.
- A qualified electrician MUST size cords over 50 feet long to prevent motor damage.

**Figure 2.** Typical 5-15 plug and receptacle.
SECTION 3: SETUP

Setup Safety

⚠️ WARNING
This machine presents serious injury hazards to untrained users. Read through this entire manual to become familiar with the controls and operations before starting the machine!

⚠️ WARNING
Wear safety glasses during the entire setup process!

Items Needed for Setup

The following items are needed to complete the setup process, but are not included with your machine:

<table>
<thead>
<tr>
<th>Description</th>
<th>Qty</th>
</tr>
</thead>
<tbody>
<tr>
<td>Wrench 3/8&quot;</td>
<td>1</td>
</tr>
<tr>
<td>Wrench 5/16&quot;</td>
<td>1</td>
</tr>
<tr>
<td>Phillips Screwdriver #2</td>
<td>1</td>
</tr>
</tbody>
</table>

Unpacking

Your machine was carefully packaged for safe transportation. Remove the packaging materials from around your machine and inspect it. If you discover the machine is damaged, please immediately call Customer Service at (570) 546-9663 for advice.

Save the containers and all packing materials for possible inspection by the carrier or its agent. Otherwise, filing a freight claim can be difficult.

When you are completely satisfied with the condition of your shipment, inventory the contents.
Inventory

The following is a description of the components shipped with your machine. Lay the components out to inventory them.

**Note:** If you can't find an item on this list, check the mounting location on the machine or examine the packaging materials carefully. Occasionally we pre-install certain components for shipping purposes.

**Inventory:** (Figures 3 & 4)

</tbody>
</table>

If any nonproprietary parts are missing (e.g. a nut or a washer), we will gladly replace them; or for the sake of expediency, replacements can be obtained at your local hardware store.

**WARNING**

**SUFFOCATION HAZARD!**

Immediately discard all plastic bags and packing materials to eliminate choking/suffocation hazards for children and animals.
Hardware Recognition Chart

USE THIS CHART TO MATCH UP HARDWARE DURING THE ASSEMBLY PROCESS.

- Measure Bolt Diameter by placing inside circle.
- Lines are 1mm apart.
- LINES ARE 1/8" INCH APART.
- WASHER DIAMETERS ARE MEASURED BY THE INSIDE DIAMETER.
Site Considerations

Floor Load
Refer to the Machine Data Sheet for the weight and footprint specifications of your machine. Some tool tables or workbenches may require additional reinforcement to support both the machine and the workpiece.

Placement Location
This machine is designed to operate when the ambient temperature is between 41°F to 122°F, and when the humidity is between 30% and 95%. However, if the machine is only to be use in cycles that are less than 24-hour runs and allowed to cool between the runs, the maximum ambient temperature range for operation can be raised to 133°F.

Consider existing and anticipated needs, size of material to be welded, and space for auxiliary stands, work tables or other machinery when establishing a location for your new machine. See Figure 5 for the minimum working clearances.

---

**CAUTION**
Children and visitors may be seriously injured if unsupervised around this machine. Lock entrances to the shop or disable start switch or power connection to prevent unsupervised use.

---

**Figure 5.** Typical working clearances.
Assembly

Two types of suction hood mounting fixtures need to be assembled. The first type is the clamping base for the edge of a welding bench. The second type is the magnetic base for clamping on metal surfaces. The support arm system and the hood also require assembly.

To assemble these items:

1. Assemble the hood bracket to the hood using two 5/16"-18 X 3/4" hex bolts, flat washers, and lock washers (Figure 6).

2. Secure the hood bracket to the support rod with the lock lever.

3. Place the workbench clamp on the edge of your welding table and tighten in place with the two hand knobs (Figure 7).

4. Insert the hood support rod into the workbench clamp, and tighten the lock knob (Figure 7) for clamping option 1.

   —For clamping option 2, install the support arm as shown in Figure 8.

   —For the magnetic clamping option, insert the rod into the magnetic base and tighten the knob as shown in Figure 9.

5. Use the the three #10-24 x 3/8" Phillips head screws, and the three hex nuts to assemble the magnetic base to the magnetic base support as shown in Figure 9.
Test Run

Once all ducting has been attached, test run your machine to make sure it runs properly.

If, during the test run you cannot easily locate the source of an unusual noise or vibration, stop using the machine immediately, then review the Troubleshooting on Page 24.

If you still cannot remedy a problem, contact our Tech Support at (570) 546-9663 for assistance.

To test run the machine:

1. Refer to the Maintenance section on Page 21, and make sure that all filters are properly positioned.

2. Make sure all tools and objects used during setup are cleared away from the suction intake, so the suction hood will not draw in any objects when the machine is started.

3. Plug in the machine and press the ON button (Figure 10).

4. Let the machine run for at least 1 minute while you evaluate the machine for the following:
   - Listen for whistling sounds coming from end covers or panels, which indicate a poor seal or gasket. Tighten screws and replace foam seal as required.
   - If a fan is not working, or you hear any strange or unusual metallic noise or feel a harmonic vibration, shut the machine OFF and correct the problem before operating the machine again. Always disconnect the machine from power when investigating or correcting potential problems.

Suction Hood/ Ducting Installation

Avoid having a suction hose run that is longer than 20 feet or using alternating sizes of ducting connections. Also using too many elbows or tees will dramatically reduce the available CFM at the welding or cutting location.

Before connecting to a welding downdraft table, make sure that it is an approved welding downdraft table that catches and arrests all sparks, slag, and molten metal. This fume collector is only designed to filter out welding dust, smoke, and fumes from contaminated air. DO NOT use this machine to directly collect burning slag or molten metal underneath cutting or welding operations.

Control Panel

A. ON/OFF Button: Toggles machine operation ON and OFF.

B. Filter Warning Lamp: The lamp illuminates when one or more filters are becoming clogged and need cleaning or replacement.

C. 15-Amp Circuit Breaker: Protects the machine from overload.

Figure 10. Control panel.
SECTION 4: OPERATIONS

Operation Safety

**WARNING**
To reduce the risk of serious injury when using this machine, read and understand this entire manual before beginning any operations.

**WARNING**
Damage to your eyes and lungs could result from using this machine without proper protective gear. Always wear safety glasses and a respirator when operating this machine.

**WARNING**
Loose hair, clothing, or jewelry could get caught in machinery and cause serious personal injury. Keep these items away from moving parts at all times to reduce this risk.

**NOTICE**
If you have never used this type of machine or equipment before, WE STRONGLY RECOMMEND that you read books, trade magazines, or get formal training before beginning any projects. Regardless of the content in this section, Grizzly Industrial will not be held liable for accidents caused by lack of training.

---

General Operation

This portable fume extractor is not designed to be a substitute for a respirator or fresh-air type respirator. Make sure that you are familiar with the materials to be welded and know what types of fumes will be created. Additionally, many metals have coatings that produce poisonous fumes when heated. Make sure to strip coatings off at least four inches away from the area of heat application before welding or cutting.

This machine is not designed to collect burning slag or molten metal from a cutting torch or a plasma cutter operations. In these circumstances, you must use an appropriate welding downdraft table that will arrest all molten metal and slag.

Between welding jobs, periodically clean out the slag catch and clean the stainless steel screen (Figure 11). If the type of welding changes drastically or if paint, rubberized undercoating, or other coatings cause excessive smoke, you may have to replace or clean filters more often in order to maintain a satisfactory CFM.

**Figure 11.** Slag catch and stainless screen.

It is always better to follow good welding practices and remove coatings that may smoke and possibly contaminate the weld. This machine does not save you from the task of proper workpiece preparation.
SECTION 5: ACCESSORIES

T20635—Stainless Screen (Stage 1)
Made of high-quality stainless steel, this 1-2mm removable mesh arrests sparks and stops hot slag from entering filter stage 1. Make sure that you clean this mesh often and inspect for holes or damage. Under correct use, this screen should last for years.

Figure 12. Stainless Screen (Stage 1).

T20637—1-2 Micron Filter (Stage 3)
This pleated filter is also a hard-working particle collector. It will have to be replaced periodically when the stage 2 filter is replaced. Make sure to have a few of these on hand for those high-volume or dirty welding jobs.

Note: Proper workpiece cleaning to reduce the amount of smoke given off during welding is critical for extending stage 2 and 3 filter life.

Figure 14. 1-2 Micron Filter (Stage 3).

T20636—2-10 Micron Filter (Stage 2)
This pleated filter, is the consumable workhorse of your fume extractor. It removes most of the 2-10 micron and larger grit, dust, and oily smoke. Make sure that you have a few of these on hand to be ready for high-volume or dirty welding jobs.

Note: Proper workpiece cleaning to reduce the amount of smoke given off during welding is critical for extending stage 2 and 3 filter life.

Figure 13. 2-10 Micron Filter (Stage 2).

T20638—1 Micron Filter (Stage 4)
This serviceable filter, catches most of the remaining 1-micron particles that get through stage 3. This filter does not need to be replaced as often as the consumable filters as it can be removed and cleaned manually a number of times before replacement is required. However, always have an extra ready to be installed.

Figure 15. 1 Micron Filter (Stage 4).

Call 1-800-523-4777 To Order
T20639—0.3 Micron HEPA Filter (Stage 5)
This filter removes 99.97% of the 0.3-micron particles. This filter rarely needs to be replaced as it is also a serviceable filter. If the machine is used properly, and the filter is periodically removed and cleaned manually this filter may last for years.

Figure 15. HEPA filter (Stage 5).

H9748—Leather Jacket Medium (40–42)
H9887—Leather Jacket Large (44–46)
H9888—Leather Jacket X-Large (48–52)
H9746—Leather Knee Pads
H9745—Leather Shoe Covers
These leather jackets, knee pads, and shoe covers provide full protection from welding sparks and spatter. Gloves not included.

Figure 16. Leather welding protection.

G8028—Small Angle Welding Clamp
G8029—Large Angle Welding Clamp
Take the set up time and effort out of metalworking applications that involve holding material for right angle joining, assembling, welding or grinding. A self-centering jaw quickly adjusts to clamp workpieces, even accommodating pieces of different sizes. The 90° angle clamp is made of high quality cast iron. The spindle, which automatically pivots for an accurate 90° grip, is also copper plated to resist weld spatter. Work surface and base are milled for added precision. Small clamp weighs approximately 12 lbs. Large clamp weighs approximately 29 lbs.

Figure 17. Cast-iron welding clamp.

T20505—Welding Respirator with Valve
Added flame retardants help reduce the shell flammability, making these N99 Premium Particulate Respirators ideal for welding applications. NIOSH certified to a 99% efficiency for particulates free of oil.

Figure 18. Model T20505 welding respirator.

Call 1-800-523-4777 To Order
H7786—Auto Darkening Welding Helmet
Automatic UV and IR filters protect eyes from harmful visible and invisible light during welding. Switching time is less than or equal to 2 milliseconds, so there’s no need to flip the helmet up to see your work under normal light conditions. Full face protection features adjustable head suspension and adjustable delay time, sensitivity and dark shade protection. Viewing area is 3 1/2” x 1 1/2”. Includes 2 AAA batteries.

Figure 19. Model H7786 welding helmet.

H3157—Deluxe Welding Gloves
Top grain, leather gloves protect against welding hazards. Extra long to protect wrists and forearms. One size fits all.

Figure 20. Model H3157 deluxe welding gloves.

SECTION 6: MAINTENANCE

WARNING
Always disconnect power to the machine before performing maintenance. Failure to do this may result in serious personal injury.

Schedule

For optimum performance from your machine, follow this maintenance schedule and refer to any specific instructions given in this section. Always wear an OSHA approved respirator when cleaning this machine.

Daily Check/Maintenance:
• Leaking seals or ducting.
• Worn or damaged power cord.
• Clean slag catch and screen as required.
• Inspect and correct for any other unsafe condition.
• Inspect welding area before and after welding or cutting operations for fire hazards and smouldering combustibles.

Cleaning

Cleaning the Model H8375 is relatively easy. Put on an OSHA approved respirator and vacuum excess dust with a shop vacuum fitted with a HEPA filter. Wipe off the remaining dust with a damp cloth. Do not use harsh detergents or solvents on the cabinet.

WARNING
When servicing filters, make sure that you and any bystanders are wearing appropriate respirators and body protection. When vacuuming filters and cabinet, only use a shop vacuum that is equipped with a HEPA filter, or dangerous particles may be spread throughout your shop and contaminate the air. Wrap all waste filters in air-tight plastic bags, mark and dispose of according to current laws and regulations.

Long-Term Storage

If this machine needs to be stored for a long period of time, make sure that the following conditions are met:
• Remove and manually clean the stage 4 and 5 filters.
• Clean the stainless screen and the slag catch.
• Wipe out inside of cabinet and replace stage 2 and 3 filters if required.
• Place the machine in a dry area where the humidity range will not vary beyond 30% to 95% and the storage temperature will not vary beyond -13° to 158°F.
• Cover machine to protect from dust and moisture.
Stage 1 (Model T20635) 1-2 mm screen is made of high-quality stainless steel mesh that arrests sparks and stops hot slag from entering the first pleated filter. Make sure that you clean this mesh often and inspect for holes or damage. Under correct use, this screen should last for years.

**Tools Needed**

<table>
<thead>
<tr>
<th>Qty</th>
</tr>
</thead>
<tbody>
<tr>
<td>Wire Brush</td>
</tr>
<tr>
<td>OSHA Approved Respirator</td>
</tr>
<tr>
<td>Shop Vacuum w/HEPA Filter</td>
</tr>
</tbody>
</table>

**To perform this procedure:**

1. **UNPLUG THE MACHINE!**

2. Put on your respirator, unlatch and remove the access cover, wing nuts, and the screen (Figure 21).

3. Inspect the cover seal for evidence of leaks or tears. Reseal as required.

4. Tap the screen and carefully use a wire brush to brush away built up dust and slag. If a piece of solder or slag has welded itself to the screen, do not pry it off or you may put a hole in the screen.

5. Vacuum up the loose dust in the cabinet and slag drawer, reinstall the screen and cover.

---

Stage 2 (Model T20636) and stage 3 (Model T20637) pleated filters remove most of the larger grit, dust, and oily smoke. Depending on work load and type, one or both may have to be replaced to regain lost CFM. However, do not remove and manually clean the serviceable filters (Stages 4 and 5) every time these consumable filters are replaced, doing so will unnecessarily decrease stage 4 and 5 filter life.

**Note:** Proper workpiece cleaning to reduce the amount of smoke given off during welding is critical for extending filter life.

**Tools Needed**

<table>
<thead>
<tr>
<th>Qty</th>
</tr>
</thead>
<tbody>
<tr>
<td>OSHA Approved Respirator</td>
</tr>
</tbody>
</table>

**To perform this procedure:**

1. **UNPLUG THE MACHINE!**

2. Put on your respirator and goggles, unlatch the access cover and remove it (Figure 21).

3. Remove the two wing nuts, filter retainers, and then the stainless screen (Figure 21).

4. Replace stage 2 and 3 filters so that the flow arrow (Figure 22), printed on the edge of the filter, points in the direction of air flow.

5. Reassemble the fume extractor and test it for improved suction. If the suction has only slightly improved, you must clean or replace one or both of the serviceable filters next.
Serviceable Filter Cleaning

Stage 4 (Model T20638) and stage 5 (Model T20639) pleated filters can be removed and manually cleaned multiple times before replacement is required. However, doing so can slightly reduce lifespan and filtering ability. We recommend cleaning these filters only if the CFM is still poor after replacing the consumable filters.

Tools Needed

</tr>
</tbody>
</table>

To perform this procedure:

1. UNPLUG THE MACHINE!
2. Put on your respirator and goggles, unlatch the access cover, and remove it.
3. Remove the two wing nuts, filter retainers, and the stainless steel screen (Figure 21).
4. Remove stage 2 and 3 filters (replace if required).
5. Remove stage 4 and 5 filters (Figure 23).
6. Inspect rubber seals for leaking and replace as required.
7. Support the filter element and vacuum the input side of the filter with a soft brush-type tip while ruffling the output side pleats with a soft rag or cardboard flap.
8. Hold a shop air gun or spray nozzle approximately two to three feet from the filter element. DO NOT position the blowgun tip too close to the filter, or the jet of air will tear the micro fibers or blow a hole in the filter.
9. While tapping the filter on a workbench, and in a slow and sweeping motion, blow the remaining contaminants back out the direction they came (against the direction of the printed arrow).
10. While tapping the filter on a workbench, and in a slow and sweeping motion, blow the remaining contaminants back out the direction they came (against the direction of the printed arrow).
11. Reinstall the filters to their appropriate locations in the cabinet, and reinstall the screen and access cover.

Figure 23. Stage 4 and 5 filters.

Figure 24. Empty cleaned cabinet.
SECTION 7: SERVICE

Review the troubleshooting and procedures in this section to fix or adjust your machine if a problem develops. If you need replacement parts or you are unsure of your repair skills, then feel free to call our Technical Support at (570) 546-9663.

</tbody>
</table>
Motor Brush Replacement

During the life of your fume extractor, you may find it necessary to replace the motor brushes.

Tools Needed

<table>
<thead>
<tr>
<th>Qty</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>Phillips Screwdriver #2</td>
</tr>
<tr>
<td>1</td>
<td>Acetone and Cotton Rag</td>
</tr>
<tr>
<td>1</td>
<td>Crocus Cloth (From Local Auto Parts Store)</td>
</tr>
<tr>
<td>1</td>
<td>Brush Set</td>
</tr>
</tbody>
</table>

To replace the brushes:

1. **UNPLUG THE MACHINE!**

2. Remove the eight motor cover screws and the cover (Figure 25).

3. Remove the brush housing retaining screws and the brush assembly (Figure 26).

4. Inspect the commutator surface (Figure 27).
   - If the brushes have worn deep grooves in the commutator, we recommend replacing the motor. Typically the labor involved with re-turning the commutator on a lathe and then undercutting the insulator segments far exceeds the price of a new motor.
   - If the commutator only has minor wear and black-colored carbon tracking (Figure 27), use a fine crocus cloth to polish the commutator where the brushes ride.

Finish the cleaning process by using acetone and a cotton rag to wipe off any oils or contaminants from the commutator. DO NOT use emery cloth or sandpaper to clean the commutator or you will make it out-of-round, which will cause the new brushes to arc, overheat, and wear out quickly.

5. Replace the brush assembly and reinstall the screws and wire.

6. Reinstall the motor cover.
WARNING!
SHOCK HAZARD!
Disconnect power before working on wiring.

TAPE ALONG EDGES--PLEASE DO NOT STAPLE
WARRANTY AND RETURNS

Grizzly Industrial, Inc. warrants every product it sells for a period of 1 year to the original purchaser from the date of purchase. This warranty does not apply to defects due directly or indirectly to misuse, abuse, negligence, accidents, repairs or alterations or lack of maintenance. This is Grizzly’s sole written warranty and any and all warranties that may be implied by law, including any merchantability or fitness, for any particular purpose, are hereby limited to the duration of this written warranty. We do not warrant or represent that the merchandise complies with the provisions of any law or acts unless the manufacturer so warrants. In no event shall Grizzly’s liability under this warranty exceed the purchase price paid for the product and any legal actions brought against Grizzly shall be tried in the State of Washington, County of Whatcom.

We shall in no event be liable for death, injuries to persons or property or for incidental, contingent, special, or consequential damages arising from the use of our products.

To take advantage of this warranty, contact us by mail or phone and give us all the details. We will then issue you a “Return Number,” which must be clearly posted on the outside as well as the inside of the carton. We will not accept any item back without this number. Proof of purchase must accompany the merchandise.

The manufacturers reserve the right to change specifications at any time because they constantly strive to achieve better quality equipment. We make every effort to ensure that our products meet high quality and durability standards and we hope you never need to use this warranty.

Please feel free to write or call us if you have any questions about the machine or the manual.

Thank you again for your business and continued support. We hope to serve you again soon.
