The following changes were recently made to this machine since the owner's manual was printed:

- Redesigned stand column shafts, column caps, and various related hardware (see below).

Aside from this information, all other content in the owner's manual applies and MUST be read and understood for your own safety. **IMPORTANT: Keep this update with the owner's manual for future reference.**

For questions or help, contact our Tech Support at (570) 546-9663 or techsupport@grizzly.com.

**Revised Stand Parts**

This manual provides critical safety instructions on the proper setup, operation, maintenance, and service of this machine/tool. Save this document, refer to it often, and use it to instruct other operators.

Failure to read, understand and follow the instructions in this manual may result in fire or serious personal injury—including amputation, electrocution, or death.

The owner of this machine/tool is solely responsible for its safe use. This responsibility includes but is not limited to proper installation in a safe environment, personnel training and usage authorization, proper inspection and maintenance, manual availability and comprehension, application of safety devices, cutting/sanding/grinding tool integrity, and the usage of personal protective equipment.

The manufacturer will not be held liable for injury or property damage from negligence, improper training, machine modifications or misuse.

Some dust created by power sanding, sawing, grinding, drilling, and other construction activities contains chemicals known to the State of California to cause cancer, birth defects or other reproductive harm. Some examples of these chemicals are:

- Lead from lead-based paints.
- Crystalline silica from bricks, cement and other masonry products.
- Arsenic and chromium from chemically-treated lumber.

Your risk from these exposures varies, depending on how often you do this type of work. To reduce your exposure to these chemicals: Work in a well ventilated area, and work with approved safety equipment, such as those dust masks that are specially designed to filter out microscopic particles.

INTRODUCTION

Manual Accuracy

We are proud to provide a high-quality owner’s manual with your new machine!

We made every effort to be exact with the instructions, specifications, drawings, and photographs contained inside. Sometimes we make mistakes, but our policy of continuous improvement also means that sometimes the machine you receive will be slightly different than what is shown in the manual.

If you find this to be the case, and the difference between the manual and machine leaves you confused about a procedure, check our website for an updated version. We post current manuals and manual updates for free on our website at www.grizzly.com.

Alternatively, you can call our Technical Support for help. Before calling, please write down the Manufacture Date and Serial Number stamped into the machine ID label (see below). This information helps us determine if updated documentation is available for your machine.

Contact Info

We stand behind our machines. If you have any questions or need help, use the information below to contact us. Before contacting, please get the serial number and manufacture date of your machine. This will help us help you faster.

Grizzly Technical Support
1203 Lycoming Mall Circle
Muncy, PA 17756
Phone: (570) 546-9663
Email: techsupport@grizzly.com

We want your feedback on this manual. What did you like about it? Where could it be improved? Please take a few minutes to give us feedback.

Grizzly Documentation Manager
P.O. Box 2069
Bellingham, WA 98227-2069
Email: manuals@grizzly.com
MODEL G4176 1/4 HP POWER FEEDER

Product Dimensions:
- Weight: 73 lbs.
- Width (side-to-side) x Depth (front-to-back) x Height: 34 x 13 x 24 in.
- Footprint (Length x Width): N/A x N/A

Shipping Dimensions:
- Type: Cardboard
- Content: Machine
- Weight: 79 lbs.
- Length x Width x Height: 23 x 23 x 11 in.

Electrical:
- Power Requirement: 120V, Single-Phase, 60 Hz
- Minimum Circuit Size: 15A
- Switch: Forward/Reverse Barrel
- Switch Voltage: 120V
- Cord Length: 9 ft.
- Cord Gauge: 18 AWG
- Plug Included: Yes
- Included Plug Type: NEMA 5-15

Motors:
- Main
  - Type: TEFC Capacitor Start Induction
  - Horsepower: 1/4 HP
  - Voltage: 120V
  - Phase: Single
  - Amps: 2.5A
  - Speed: 1680 RPM
  - Cycle: 60 Hz
  - Number of Speeds: 1
  - Power Transfer: Gear Box
  - Bearings: Lubricated for Life

Main Specifications:
- Workpiece Capacities
  - Minimum WorkPiece Length: 5 in.

Operation Info
- Number of Feed Speeds: 4
- Feed Speeds: 18, 25, 30, 41 FPM
- Swing: 360 deg.
- Vertical Movement: 6-1/2 in.
- Horizontal Movement: 10 in.
- Rotation: Forward, Reverse
Roller Info

Number of Rollers............................................................................................................................................. 3
Roller Width......................................................................................................................................... 1-3/16 in.
Roller Diameter...................................................................................................................................... 3-1/8 in.
Roller Suspension..................................................................................................................................... 3/4 in.
Maximum Height Rollers Parallel Table Surface......................................................................................... 6 in.
Centers Between Rollers................................................................................................................................. 3-3/8 – 4-3/8 in.

Other

Column Diameter............................................................................................................................................ 1-1/2 in.

Construction Info

Roller....................................................................................................................................... Synthetic Rubber
Housing...................................................................................................................................... Cast Aluminum
Supports............................................................................................................................................... Cast Iron
Column....................................................................................................................................................... Steel
Paint......................................................................................................................................................... Epoxy

Other Specifications:

ISO 9001 Factory .................................................................................................................................................. Yes
CSA Certified ......................................................................................................................................................... Yes
Country Of Origin ............................................................................................................................................. Taiwan
Warranty ........................................................................................................................................................... 1 Year
Serial Number Location ...................................................... "Checked" Sticker, On In-feed Portion Of Housing's Roller Cover Side
Customer Assembly & Setup Time ................................................................. 30 Minutes

Features:

Rollers are Spring Tensioned
Heavy-Duty Gear Reduction with Hardened Gears
Universal Positioning with Handle Locks
Components & Terminology

Refer to Figure 1 and your power feeder to familiarize yourself with the controls, features, and terminology used in this manual. Doing so will make setup, use, and any future maintenance easier.

Figure 1. Controls and features.

WARNING
To reduce your risk of serious injury, read this entire manual BEFORE using machine.
For Your Own Safety, Read Instruction Manual Before Operating This Machine

The purpose of safety symbols is to attract your attention to possible hazardous conditions. This manual uses a series of symbols and signal words intended to convey the level of importance of the safety messages. The progression of symbols is described below. Remember that safety messages by themselves do not eliminate danger and are not a substitute for proper accident prevention measures. Always use common sense and good judgment.

**DANGER** Indicates an imminently hazardous situation which, if not avoided, **WILL** result in death or serious injury.

**WARNING** Indicates a potentially hazardous situation which, if not avoided, **COULD** result in death or serious injury.

**CAUTION** Indicates a potentially hazardous situation which, if not avoided, **MAY** result in minor or moderate injury. It may also be used to alert against unsafe practices.

**NOTICE** This symbol is used to alert the user to useful information about proper operation of the machine.

Safety Instructions for Machinery

**WARNING**

**OWNER’S MANUAL.** Read and understand this owner's manual BEFORE using machine.

**TRAINED OPERATORS ONLY.** Untrained operators have a higher risk of being hurt or killed. Only allow trained/supervised people to use this machine. When machine is not being used, disconnect power, remove switch keys, or lock-out machine to prevent unauthorized use—especially around children. Make workshop kid proof!

**DANGEROUS ENVIRONMENTS.** Do not use machinery in areas that are wet, cluttered, or have poor lighting. Operating machinery in these areas greatly increases the risk of accidents and injury.

**MENTAL ALERTNESS REQUIRED.** Full mental alertness is required for safe operation of machinery. Never operate under the influence of drugs or alcohol, when tired, or when distracted.

**ELECTRICAL EQUIPMENT INJURY RISKS.** You can be shocked, burned, or killed by touching live electrical components or improperly grounded machinery. To reduce this risk, only allow qualified service personnel to do electrical installation or repair work, and always disconnect power before accessing or exposing electrical equipment.

**DISCONNECT POWER FIRST.** Always disconnect machine from power supply BEFORE making adjustments, changing tooling, or servicing machine. This prevents an injury risk from unintended startup or contact with live electrical components.

**EYE PROTECTION.** Always wear ANSI-approved safety glasses or a face shield when operating or observing machinery to reduce the risk of eye injury or blindness from flying particles. Everyday eyeglasses are NOT approved safety glasses.
WARNING

WEARING PROPER APPAREL. Do not wear clothing, apparel or jewelry that can become entangled in moving parts. Always tie back or cover long hair. Wear non-slip footwear to avoid accidental slips, which could cause loss of work-piece control.

HAZARDOUS DUST. Dust created while using machinery may cause cancer, birth defects, or long-term respiratory damage. Be aware of dust hazards associated with each workpiece material, and always wear a NIOSH-approved respirator to reduce your risk.

HEARING PROTECTION. Always wear hearing protection when operating or observing loud machinery. Extended exposure to this noise without hearing protection can cause permanent hearing loss.

REMOVE ADJUSTING TOOLS. Tools left on machinery can become dangerous projectiles upon startup. Never leave chuck keys, wrenches, or any other tools on machine. Always verify removal before starting!

USE CORRECT TOOL FOR THE JOB. Only use this tool for its intended purpose—do not force it or an attachment to do a job for which it was not designed. Never make unapproved modifications—modifying tool or using it differently than intended may result in malfunction or mechanical failure that can lead to personal injury or death!

AWKWARD POSITIONS. Keep proper footing and balance at all times when operating machine. Do not overreach! Avoid awkward hand positions that make workpiece control difficult or increase the risk of accidental injury.

CHILDREN & BYSTANDERS. Keep children and bystanders at a safe distance from the work area. Stop using machine if they become a distraction.

GUARDS & COVERS. Guards and covers reduce accidental contact with moving parts or flying debris. Make sure they are properly installed, undamaged, and working correctly.

FORCING MACHINERY. Do not force machine. It will do the job safer and better at the rate for which it was designed.

NEVER STAND ON MACHINE. Serious injury may occur if machine is tipped or if the cutting tool is unintentionally contacted.

STABLE MACHINE. Unexpected movement during operation greatly increases risk of injury or loss of control. Before starting, verify machine is stable and mobile base (if used) is locked.

USE RECOMMENDED ACCESSORIES. Consult this owner’s manual or the manufacturer for recommended accessories. Using improper accessories will increase the risk of serious injury.

UNATTENDED OPERATION. To reduce the risk of accidental injury, turn machine OFF and ensure all moving parts completely stop before walking away. Never leave machine running while unattended.

MAINTAIN WITH CARE. Follow all maintenance instructions and lubrication schedules to keep machine in good working condition. A machine that is improperly maintained could malfunction, leading to serious personal injury or death.

CHECK DAMAGED PARTS. Regularly inspect machine for any condition that may affect safe operation. Immediately repair or replace damaged or mis-adjusted parts before operating machine.

MAINTAIN POWER CORDS. When disconnecting cord-connected machines from power, grab and pull the plug—NOT the cord. Pulling the cord may damage the wires inside. Do not handle cord/plug with wet hands. Avoid cord damage by keeping it away from heated surfaces, high traffic areas, harsh chemicals, and wet/damp locations.

EXPERIENCING DIFFICULTIES. If at any time you experience difficulties performing the intended operation, stop using the machine! Contact our Technical Support at (570) 546-9663.
Additional Safety for Power Feeders

⚠️ WARNING

MAIN INJURY HAZARDS: Death, amputation, or crushing injuries from getting entangled in moving parts—which may include being pulled into the cutting tool on attached machinery; and death, blindness, broken bones, or bruises from being struck by an ejected workpiece (kickback). To minimize your risk of these hazards, always heed the following information:

ATTACHED MACHINERY. Follow all warnings and safety information for the attached machine doing the cutting work.

HAND SAFETY. Keep hands away from rotating parts on power feeder and spinning blade or cutter of associated machine. Turn power feeder and associated machine OFF and only use a brush or compressed air to remove sawdust.

INSTALLING GUARDS. Install guards, fences, and hold-downs before starting attached machine or power feeder. Repair or replace guards promptly if they become damaged.

KICKBACK. Occurs when workpiece is ejected from machine with great force, striking operator or bystanders. Commonly caused by improper machine or power feeder setup.

VERIFY EACH SETUP. Ensure that power feeder is set up correctly and firmly secured before feeding workpiece. An improperly adjusted power feeder could increase the risk of kickback, because it will continue feeding when stock is not properly positioned for the cut.

FEATHERBOARD. When cutting long or large stock that is difficult to feed properly, use a featherboard before power feeder (on the infeed side) to maintain even pressure and control of workpiece against fence, and help reduce risk of kickback.

FEED WORKPIECE PROPERLY. Verify blade or cutter of associated machine is at full speed before feeding stock with power feeder. Do not feed workpiece too quickly. Verify power feeder wheels are slightly lower than workpiece. Stop power feeder before stopping cutting tool.

WORKPIECE SUPPORT. Support workpiece continuously during operation as required. Use auxiliary stands or support tables for long or wide stock.

ADJUSTMENTS/MAINTENANCE. Make sure power feeder is turned OFF, disconnected from power, and all moving parts are completely stopped before doing adjustments or maintenance.

⚠️ WARNING

Like all machines there is danger associated with this machine. Accidents are frequently caused by lack of familiarity or failure to pay attention. Use this machine with respect and caution to lessen the possibility of operator injury. If normal safety precautions are overlooked or ignored, serious personal injury may occur.

⚠️ CAUTION

No list of safety guidelines can be complete. Every shop environment is different. Always consider safety first, as it applies to your individual working conditions. Use this and other machinery with caution and respect. Failure to do so could result in serious personal injury, damage to equipment, or poor work results.
SECTION 2: POWER SUPPLY

Availability
Before installing the machine, consider the availability and proximity of the required power supply circuit. If an existing circuit does not meet the requirements for this machine, a new circuit must be installed. To minimize the risk of electrocution, fire, or equipment damage, installation work and electrical wiring must be done by an electrician or qualified service personnel in accordance with all applicable codes and standards.

WARNING
Electrocution, fire, or equipment damage may occur if machine is not correctly grounded and connected to the power supply.

Full-Load Current Rating
The full-load current rating is the amperage a machine draws at 100% of the rated output power. On machines with multiple motors, this is the amperage drawn by the largest motor or sum of all motors and electrical devices that might operate at one time during normal operations.

Full-Load Current Rating at 120V ............2.5A
The full-load current is not the maximum amount of amps that the machine will draw. If the machine is overloaded, it will draw additional amps beyond the full-load rating.

If the machine is overloaded for a sufficient length of time, damage, overheating, or fire may result—especially if connected to an undersized circuit. To reduce the risk of these hazards, avoid overloading the machine during operation and make sure it is connected to a power supply circuit that meets the specified circuit requirements.

WARNING
Serious injury could occur if you connect the machine to power before completing the setup process. DO NOT connect to power until instructed later in this manual.

120V Circuit Requirements
This machine is prewired to operate on a power supply circuit that has a verified ground and meets the following requirements:

Nominal Voltage ........................................120V
Cycle ..........................................................60 Hz
Phase ...........................................Single-Phase
Power Supply Circuit ..................................15A

A power supply circuit includes all electrical equipment between the breaker box or fuse panel in the building and the machine. The power supply circuit used for this machine must be sized to safely handle the full-load current drawn from the machine for an extended period of time. (If this machine is connected to a circuit protected by fuses, use a time delay fuse marked D.)

CAUTION
For your own safety and protection of property, consult an electrician if you are unsure about wiring practices or electrical codes in your area.

Note: The circuit requirements listed in this manual apply to a dedicated circuit—where only one machine will be running at a time. If this machine will be connected to a shared circuit where multiple machines will be running at the same time, consult a qualified electrician to ensure that the circuit is properly sized for safe operation.
Improper connection of the equipment-grounding wire can result in a risk of electric shock. The wire with green insulation (with or without yellow stripes) is the equipment-grounding wire. If repair or replacement of the power cord or plug is necessary, do not connect the equipment-grounding wire to a live (current carrying) terminal.

Check with a qualified electrician or service personnel if you do not understand these grounding requirements, or if you are in doubt about whether the tool is properly grounded. If you ever notice that a cord or plug is damaged or worn, disconnect it from power, and immediately replace it with a new one.

Extension Cords
We do not recommend using an extension cord with this machine. If you must use an extension cord, only use it if absolutely necessary and only on a temporary basis.

Extension cords cause voltage drop, which may damage electrical components and shorten motor life. Voltage drop increases as the extension cord size gets longer and the gauge size gets smaller (higher gauge numbers indicate smaller sizes).

Any extension cord used with this machine must contain a ground wire, match the required plug and receptacle, and meet the following requirements:

Minimum Gauge Size.......................16 AWG
Maximum Length (Shorter is Better)........50 ft.
SECTION 3: SETUP

Unpacking

Your machine was carefully packaged for safe transportation. Remove the packaging materials from around your machine and inspect it. If you discover any damage, please call us immediately at (570) 546-9663 for advice.

Save the containers and all packing materials for possible inspection by the carrier or its agent. Otherwise, filing a freight claim can be difficult.

When you are completely satisfied with the condition of your shipment, inventory the contents.

WARNING

SUFFOCATION HAZARD!
Keep children and pets away from plastic bags or packing materials shipped with this machine. Discard immediately.

Needed for Setup

The following are needed to complete the setup process, but are not included with your machine.

<table>
<thead>
<tr>

</tbody>
</table>

**NOTICE**

If you cannot find an item on this list, carefully check around/inside the machine and packaging materials. Often, these items get lost in packaging materials while unpacking or they are pre-installed at the factory.
Cleanup

The unpainted surfaces of your machine are coated with a heavy-duty rust preventative that prevents corrosion during shipment and storage. This rust preventative works extremely well, but it will take a little time to clean.

Be patient and do a thorough job cleaning your machine. The time you spend doing this now will give you a better appreciation for the proper care of your machine's unpainted surfaces.

There are many ways to remove this rust preventative, but the following steps work well in a wide variety of situations. Always follow the manufacturer's instructions with any cleaning product you use and make sure you work in a well-ventilated area to minimize exposure to toxic fumes.

Before cleaning, gather the following:
- Disposable Rags
- Cleaner/degreaser (WD•40 works well)
- Safety glasses & disposable gloves
- Plastic paint scraper (optional)

Basic steps for removing rust preventative:

1. Put on safety glasses.
2. Coat the rust preventative with a liberal amount of cleaner/degreaser, then let it soak for 5–10 minutes.
3. Wipe off the surfaces. If your cleaner/degreaser is effective, the rust preventative will wipe off easily. If you have a plastic paint scraper, scrape off as much as you can first, then wipe off the rest with the rag.
4. Repeat Steps 2–3 as necessary until clean, then coat all unpainted surfaces with a quality metal protectant to prevent rust.

Gasoline or products with low flash points can explode or cause fire if used to clean machinery. Avoid cleaning with these products.

Many cleaning solvents are toxic if concentrated amounts are inhaled. Only work in a well-ventilated area.

Avoid chlorine-based solvents, such as acetone or brake parts cleaner, that may damage painted surfaces. Test all cleaners in an inconspicuous area before using to make sure they will not damage paint.

T23692—Orange Power Degreaser
A great product for removing the waxy shipping grease from your machine during clean up.

Call 1-800-523-4777 To Order

Figure 5. T23692 Orange Power Degreaser.
Assembly

⚠️ WARNING

You MUST assemble all guards, fences, and holdowns before starting your machine or power feeder. Failure to heed this warning could result in serious personal injury.

To correctly position this power feeder on your table top, completely assemble the power feeder first in the order of A, B and C, as shown in Figures 6 and 7. Next, refer to Base Mounting on Page 15. With the power feeder unit completely assembled, it will be easier to locate where on the table top you will need to drill your base mounting holes, so you can take advantage of the full range of power feeder swing and adjustments.

Figure 6. Stand assembly.

Figure 7. Assembled unit.
Position the power feeder on the table top to determine where to drill your base mounting holes, so you can maximize power feeder swing and adjustment options.

There are thee mounting options available: Through Bolt Mounting, Direct Mounting, and Quick Holder Kit Mounting (discussed on Page 21). Choose an option that suits your requirements.

Whichever way you mount your power feeder, you must be able to use the handcranks and lock levers to position the rubber wheels parallel with the table surface and \( \frac{1}{8} \)” lower than the thickness of your workpiece.

Also, you must be able to point the power feeder slightly towards the machine fence (see Figure 8). In other words, the tracking of the power feeder must be toed-in approximately 1° to 1.5° degrees toward the machine fence so the rubber wheels slightly push the workpiece against the fence during cutting operations.

If cutting long or large stock that is difficult to feed properly, use a featherboard before the powerfeeder (on the infeed side) to maintain even pressure and control of the workpiece against the fence.

---

**Figure 8.** Typical power feed mounting on a shaper, jointer, and table saw.
Mounting Options

To correctly position this power feeder on your table top, completely assemble the power feeder first, then refer to this section and mount your base to the table using one of the two methods below. The reason for this order is that with the power feeder unit completely assembled, it will be easier to locate where on the table top you will need to drill your base mounting holes, so you can take advantage of the full range of power feeder swing and adjustments.

Through-Bolt Mounting

We recommend that you mount your new power feeder to the machine table with through bolts, nuts, and washers (see Figure 9). This option will give the most rigidity and clamping strength to prevent the feeder base from twisting out of alignment during use. However, if under-table support webs interfere with washer or nut locations under the table, you must use an optional clamping kit, or drill and thread holes directly into the table as described in Direct Mounting.

Direct Mounting

Use the included mounting template to drill and tap your table, so the power feeder base can be directly mounted to the table surface (see Figure 10). If the table is thinner than 3/8" thick where the threaded holes would be drilled and tapped, or if support webbing is in the way, the threads may strip or loosen as the power feeder is used. Thread locking compound will not cure this situation. Revert to the Through-Bolt Mounting option. In any case, make sure to use a medium-grade liquid thread locking compound on all threads.
Test Run

Once the power feeder assembly is complete and it is mounted on the table, you must test run your power feeder to make sure it runs properly.

If, during the test run, you cannot easily locate the source of an unusual noise or vibration, stop using the power feeder immediately, then review the Troubleshooting on Page 23.

If you still cannot remedy a problem, contact our Technical Support at (570) 546-9663 for assistance.

To test run the power feed:

1. Read the entire instruction manual first!

2. Make sure all tools and foreign objects have been removed from the tabletop area.

3. Make sure that the power feeder gearbox oil level is full, the oil level should be 1" below the oil fill port. See Figure 1 on Page 5 for oil fill port location.

4. Ensure that all tools and objects used during set up are cleared away from the machine.

5. Adjust and lock the power feeder so the wheels are held approximately one inch above the table and nothing will interfere with wheel rotation.

6. Connect the power feeder to the power supply and use the feed direction switch (see Figure 11) to test operation in both FOR and REV directions.

— Listen and watch for abnormal noises or vibrations. The power feeder should run smoothly.

— Correct for any unusual noises or vibrations before operating the power feeder any further. Always disconnect the power feeder from power when investigating or correcting potential problems.

Figure 11. Feed direction switch.

WARNING

Loose hair, clothing, or jewelry could get caught in machinery and cause serious personal injury. Keep these items away from moving parts at all times to reduce this risk.
SECTION 4: OPERATIONS

Basic Use & Care

**WARNING**
To reduce your risk of serious injury, read this entire manual BEFORE using machine.

**WARNING**
To reduce risk of eye injury from flying chips or lung damage from breathing dust, always wear safety glasses and a respirator when operating this machine.

**WARNING**
Loose hair, clothing, or jewelry could get caught in machinery and cause serious personal injury. Keep these items away from moving parts at all times to reduce this risk.

**NOTICE**
If you are not experienced with this type of machine, WE STRONGLY RECOMMEND that you seek additional training outside of this manual. Read books/magazines or get formal training before beginning any projects. Regardless of the content in this section, Grizzly Industrial will not be held liable for accidents caused by lack of training.

Power feeders reduce kickback hazards and improve cutting results by feeding in a consistent and stable manner. Remember, do not to stand in the path of potential kickback.

When not in use, support the power feeder with a wooden block so the rubber wheels are raised above the table and do not compress from the weight of the power feeder.

The universal joints on this power feeder allow you to adjust the power feeder tracking and height to accommodate many workpiece sizes. Before loosening any lock lever, always support the power feeder with a block of wood, so the power feeder does not drop and cause damage.

Adjust the power feeder so it is toed-in approximately 1° to 1.5° degrees towards the machine fence. This adjustment ensures the power feeder wheels slightly push the workpiece against the fence during cutting operations (see Figure 8 on Page 15). A featherboard may be used on the infeed side to assist with feeding long or large stock.

Next, adjust the power feeder so the rubber wheels are parallel with the table surface, and are 1/8" lower than the thickness of your workpiece. This adjustment ensures that the workpiece will not slip or hang in the middle of a cut. Always double check that the power feeder wheels are 1/8" lower than the workpiece before you begin feeding operations. Otherwise, the workpiece may slip and kickback.
Changing Feed Speed

Your power feeder has the option to feed a workpiece at six different feed rates: 13, 18, 25, 30, 41, and 62 feet per minute. These rates are achieved by changing the combination of change gears in the power feeder gear box.

To change the feed rate of your power feeder:

1. Move the switch to the OFF position.
2. DISCONNECT MACHINE FROM POWER!
3. Refer to the change gear chart on the inside of the chain cover (see Figure 12) or the table (see Figure 13) to find the gear combination required for your chosen feed rate.

4. Remove the chain cover and the two 14mm hex nuts securing the position A & B change gears to the shafts.
5. Swap the required gears in positions A & B shown in Figure 12.
6. Reinstall the hex nuts and the chain cover.

### Installed Change Gears:
- A, 20 Tooth + B, 30 Tooth = 18 Ft/Per Min
- A, 30 Tooth + B, 20 Tooth = 41 Ft/Per Min

### Included Accessory Change Gears:
- A, 24 Tooth + B, 26 Tooth = 25 Ft/Per Min
- A, 26 Tooth + B, 24 Tooth = 30 Ft/Per Min

### Optional Model H3236 Slow Speed Kit Gears:
- A, 16 Tooth + B, 34 Tooth = 13 Ft/Per Min
- A, 34 Tooth + B, 16 Tooth = 62 Ft/Per Min

SECTION 5: MAINTENANCE

WARNING
Always disconnect power to the machine before performing maintenance. Failure to do this may result in serious personal injury.

Schedule

For optimum performance from your machine, follow this maintenance schedule and refer to any specific instructions given in this section.

Daily Check:
- Loose mounting bolts.
- Worn switch.
- Worn or damaged cords and plugs.
- Damaged wheel rubber.
- Any other condition that could hamper the safe operation of this machine.

Cleaning

Frequently blow-off sawdust with compressed air. This is especially important for the internal working parts and motor. Dust build-up around the motor is a sure way to decrease its life span. If the wheels become loaded up with pitch, oil, or other residues, wipe them clean using a clean rag and a mild solvent. Avoid touching the plastic or paint with mineral spirits or you may damage the surfaces.

Lubrication

- To prevent surface rust and binding, periodically clean and oil all lock lever and lead screw threads with a light machine oil.
- After the first 200 hours of use, or after the first month, change the gearbox oil with 3.5 fluid ounces of a good automotive grade 80-90W gear oil. For the remaining life of the power feeder, change the oil every 1000 hours, or every 6 months. Note: To drain the unit, remove the fill plug labeled "OIL" and invert the power feeder.
- Every 40 hours of use, or once every two weeks, wipe clean and lubricate the wheel grease fittings (see Figure 14) with one pump from a grease gun filled with automotive grade GL-2 grease.
- As required to prevent rust, binding, and dry spots, brush the sprockets, chain, and change gears (see Figure 15) with a light film of an automotive grade GL-2 grease.
SECTION 6: ACCESSORIES

⚠️ WARNING
Installing unapproved accessories may cause machine to malfunction, resulting in serious personal injury or machine damage. To reduce this risk, only install accessories recommended for this machine by Grizzly.

NOTICE
Refer to our website or latest catalog for additional recommended accessories.

D3122—SHOP FOX® Push Stick
Measuring 13½" overall, this push stick allows the operator to keep their hands at a safe distance away from the blade or cutter.

D3096—SHOP FOX® Featherboard
Designed to lock into a standard ⅜" x ¾" miter slot, this featherboard is fully adjustable to accommodate a wide range of workpieces. Reduce the likelihood of kickback with this convenient accessory.

G4177—Synthetic Rubber Roller for G4176
1⅛" wide x 3½" diameter rubber rollers are made from synthetic rubber.

Figure 16. D3122 SHOP FOX® Push Stick.

Figure 17. D3096 SHOP FOX® Featherboard.

H3236—Slow Speed Kit for G4176
Increases speed range from 13 – 62 FPM, resulting in a slower feed rate desirable for some applications.

Figure 18. G4177 Synthetic Rubber Roller.

Figure 19. H3236 Quick Slow Speed Kit.

G4175—Quick Holder
This universal Quick Holder allows you to mount just about any power feeder to your machine table without drilling holes. Sturdy clamping system securely attaches to any machine table. Fits Model G4173, G4176 and H0796.

Figure 20. G4175 Quick Holder.

order online at www.grizzly.com or call 1-800-523-4777

Model G4176 (Mfd. Since 5/14)
G9766—29 Pc. HSS Drill & Tap Set – Metric
Have you ever needed a metric tap and then learn you don’t have the right drill bit for it? We offer a set of taps with all the drill bits necessary to produce perfectly tapped holes. Each size has 3 taps which include a starting taper tap, a secondary intermediate tap and a finishing bottom tap. These are great taps for those hard to tap materials. Sizes: M3-0.5, M4-0.7, M5-0.8, M6-1.0, M8-1.25, M10-1.5, M12-1.75.

Figure 21. G9766 Metric HSS Drill & Tap Set.

H1412—4 oz. Cutting & Tapping Fluid
This cutting and tapping fluid is non-ozone depleting and is safe on aluminum and exotic alloys such as stainless steel, hastelloy, inconel and titanium. The engineered formula lubrication during cutting and tapping.

Figure 22. H1412 Cutting & Tapping Fluid.

H2499—Small Half-Mask Respirator
H3631—Medium Half-Mask Respirator
H3632—Large Half-Mask Respirator
H3635—Cartridge Filter Pair P100
Wood dust has been linked to nasal cancer and severe respiratory illnesses. If you work around dust everyday, a half-mask respirator can be a lifesaver. Also compatible with safety glasses!

Figure 24. Half-mask respirator with disposable cartridge filters.

SECTION 7: SERVICE

Review the troubleshooting and procedures in this section to fix or adjust your machine if a problem develops. If you need replacement parts or you are unsure of your repair skills, then feel free to call our Technical Support at (570) 546-9663.

Troubleshooting

Motor & Electrical

<table>
<thead>
<tr>
<th>Symptom</th>
<th>Possible Cause</th>
<th>Possible Solution</th>
</tr>
</thead>
<tbody>
<tr>
<td>Motor will not start.</td>
<td>1. Low voltage.</td>
<td>1. Check power supply for proper voltage.</td>
</tr>
<tr>
<td></td>
<td>2. Open circuit in motor or loose connections.</td>
<td>2. Inspect all lead connections on motor and circuit board for loose or open connections.</td>
</tr>
<tr>
<td></td>
<td>3. Blown fuse tripped circuit breaker.</td>
<td>3. Repair for cause of overload and replace fuse or reset circuit breaker.</td>
</tr>
<tr>
<td></td>
<td>4. Capacitor at fault.</td>
<td>4. Replace capacitor.</td>
</tr>
<tr>
<td></td>
<td>5. Motor switch or motor is at fault.</td>
<td>5. Replace switch, or motor.</td>
</tr>
<tr>
<td>Fuses or circuit breakers trip.</td>
<td>1. Short circuit in line cord or plug.</td>
<td>1. Inspect cord or plug for damaged insulation and shorted wires and replace extension cord.</td>
</tr>
<tr>
<td></td>
<td>2. Short circuit in motor or loose connections.</td>
<td>2. Inspect all connections on motor for loose or shorted terminals or worn insulation.</td>
</tr>
<tr>
<td></td>
<td>3. Power feeder rollers are jammed.</td>
<td>3. Disconnect all machinery from power and correct for cause of jamming.</td>
</tr>
<tr>
<td>Motor overheats.</td>
<td>1. Motor overloaded.</td>
<td>1. Reduce power feeder feed rate.</td>
</tr>
<tr>
<td></td>
<td>2. Air circulation through the motor restricted.</td>
<td>2. Clean out motor fan cover to provide normal air circulation.</td>
</tr>
<tr>
<td></td>
<td>2. Feeder at wrong angle.</td>
<td>2. Adjust angle.</td>
</tr>
<tr>
<td>Workpiece slips while passing beneath rollers.</td>
<td>1. Rollers positioned too high, no traction.</td>
<td>1. Lower feeder.</td>
</tr>
<tr>
<td></td>
<td>2. Feeding too fast.</td>
<td>2. Slow feed speed.</td>
</tr>
<tr>
<td></td>
<td>3. Rollers are dirty or oily.</td>
<td>3. Clean roller surface with a mild solvent.</td>
</tr>
<tr>
<td>Workpiece cut is burnt.</td>
<td>1. Wrong feed speed.</td>
<td>1. Adjust feed speed.</td>
</tr>
<tr>
<td></td>
<td>2. Cutter is at fault.</td>
<td>2. Sharpen or replace dull blade or cutter.</td>
</tr>
<tr>
<td>Rough finish or chipped grain on workpiece.</td>
<td>1. Feed speed too fast.</td>
<td>1. Slow speed.</td>
</tr>
<tr>
<td></td>
<td>2. Dull cutter or blade.</td>
<td>2. Replace with sharp cutter or blade.</td>
</tr>
<tr>
<td></td>
<td>3. Power feeder angle is not toed in to keep workpiece against the fence.</td>
<td>3. Adjust power feeder so it is toed-in 1° to 1.5° toward the fence.</td>
</tr>
<tr>
<td>Fuzzy grain occurs when planing or moulding.</td>
<td>1. Lumber has high moisture content.</td>
<td>1. If moisture content is higher than 20%, sticker and allow to dry.</td>
</tr>
<tr>
<td></td>
<td>2. Dull knives/cutter.</td>
<td>2. Sharpen or replace knives.</td>
</tr>
<tr>
<td>Workpiece hangs and does not enter the machine.</td>
<td>1. Power feeder roller height is set incorrectly.</td>
<td>1. Lower the power feeder roller ⅛&quot; lower than the height of the workpiece.</td>
</tr>
</tbody>
</table>
Wheel Replacement

**WARNING**
Always disconnect power to the machine before performing maintenance. Failure to do this may result in serious personal injury.

If you damage one or more wheels or they are worn, you can easily replace the wheels.

**Tools Needed**

<table>
<thead>
<tr>
<th>Tool</th>
<th>Qty</th>
</tr>
</thead>
<tbody>
<tr>
<td>Hex Wrench 5mm</td>
<td>1</td>
</tr>
</tbody>
</table>

To replace a wheel:

1. **DISCONNECT MACHINE FROM POWER!**

2. Using a 5mm hex wrench, remove the two wheel retaining cap screws (see Figure 25).

3. Swap the old wheel with the new.

4. Reinstall the two cap screws, and tighten in an alternating pattern until the wheel is secure.

*Figure 25. Wheel replacement.*
SECTION 8: WIRING

These pages are current at the time of printing. However, in the spirit of improvement, we may make changes to the electrical systems of future machines. Compare the manufacture date of your machine to the one stated in this manual, and study this section carefully.

If there are differences between your machine and what is shown in this section, call Technical Support at (570) 546-9663 for assistance BEFORE making any changes to the wiring on your machine. An updated wiring diagram may be available. Note: Please gather the serial number and manufacture date of your machine before calling. This information can be found on the main machine label.

WARNING

Wiring Safety Instructions

SHOCK HAZARD. Working on wiring that is connected to a power source is extremely dangerous. Touching electrified parts will result in personal injury including but not limited to severe burns, electrocution, or death. Disconnect the power from the machine before servicing electrical components!

MODIFICATIONS. Modifying the wiring beyond what is shown in the diagram may lead to unpredictable results, including serious injury or fire. This includes the installation of unapproved aftermarket parts.

WIRE CONNECTIONS. All connections must be tight to prevent wires from loosening during machine operation. Double-check all wires disconnected or connected during any wiring task to ensure tight connections.

CIRCUIT REQUIREMENTS. You MUST follow the requirements at the beginning of this manual when connecting your machine to a power source.

WIRE/COMPONENT DAMAGE. Damaged wires or components increase the risk of serious personal injury, fire, or machine damage. If you notice that any wires or components are damaged while performing a wiring task, replace those wires or components.

MOTOR WIRING. The motor wiring shown in these diagrams is current at the time of printing but may not match your machine. If you find this to be the case, use the wiring diagram inside the motor junction box.

CAPACITORS/INVERTERS. Some capacitors and power inverters store an electrical charge for up to 10 minutes after being disconnected from the power source. To reduce the risk of being shocked, wait at least this long before working on capacitors.

EXPERIENCING DIFFICULTIES. If you are experiencing difficulties understanding the information included in this section, contact our Technical Support at (570) 546-9663.

TAPE ALONG EDGES--PLEASE DO NOT STAPLE
Grizzly Industrial, Inc. warrants every product it sells for a period of 1 year to the original purchaser from the date of purchase. This warranty does not apply to defects due directly or indirectly to misuse, abuse, negligence, accidents, repairs or alterations or lack of maintenance. This is Grizzly's sole written warranty and any and all warranties that may be implied by law, including any merchantability or fitness, for any particular purpose, are hereby limited to the duration of this written warranty. We do not warrant or represent that the merchandise complies with the provisions of any law or acts unless the manufacturer so warrants. In no event shall Grizzly's liability under this warranty exceed the purchase price paid for the product and any legal actions brought against Grizzly shall be tried in the State of Washington, County of Whatcom.

We shall in no event be liable for death, injuries to persons or property or for incidental, contingent, special, or consequential damages arising from the use of our products.

To take advantage of this warranty, contact us by mail or phone and give us all the details. We will then issue you a “Return Number,” which must be clearly posted on the outside as well as the inside of the carton. We will not accept any item back without this number. Proof of purchase must accompany the merchandise.

The manufacturers reserve the right to change specifications at any time because they constantly strive to achieve better quality equipment. We make every effort to ensure that our products meet high quality and durability standards and we hope you never need to use this warranty.

Please feel free to write or call us if you have any questions about the machine or the manual.

Thank you again for your business and continued support. We hope to serve you again soon.
