

MAPLE WORKBENCH TOPS

For questions or help with this product contact Tech Support at (570) 546-9663 or techsupport@grizzly.com

Introduction

The Solid Maple Cabinet Tops are as beautiful as they are functional. While you enjoy the soft grain and subtle color variations of your top, you also can use it as a true cutting surface. Coated with the same food safe Durakryl finish as the workbench tops, these maple tops require little or no maintenance while bringing together the warm texture and feel of solid wood and the durability and longevity of a solid surface.

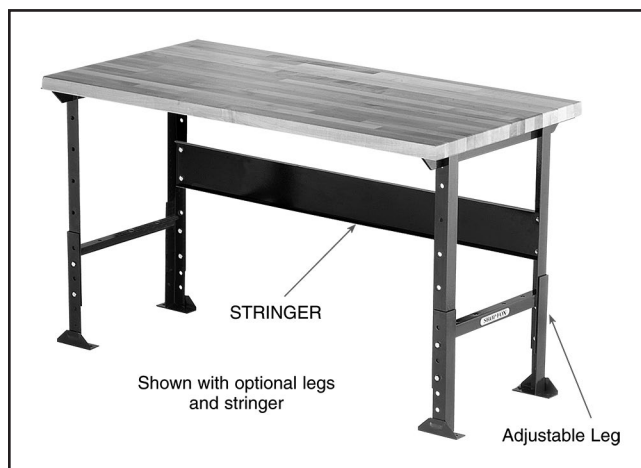

Note: *These are designed as workbench and shop cabinet tops. If used as kitchen countertops, additional sanding and finishing will be required.*

Preventing & Correcting Crowning

Maple workbench tops are flat when glued together at the factory. However, when wood travels from one climate to another, crowning or warping may occur.

Additionally, crowing or warping may occur if you improperly store your workbench top before you install it. If you cannot immediately install your workbench top, store it in a dry place and in such a manner that the wood is well supported across its length and can "breathe" on all sides.

If crowning or warping does occur, place the workbench top on two level sawhorses with the crowned side facing up and the sawhorses just under each end of the workbench. The wood will return to true.

Example of Maple Workbench Top mounted on legs.
