

## MODEL T10261/T10262 SPOKESHAVE INSTRUCTIONS

### Introduction

The spokeshave is designed to shape and smooth curved surfaces, such as wheel spokes, chair and table legs, and handles. The Model T10261/T10262 features rounded Rosewood handles, a stainless steel sole plate, and an HSS straight blade. For in-depth instructons on the use of spokeshaves, we recommend you read books and magazines, and research various techniques on the Internet.

## **Specifications**

#### **Model T10261**

Blade	. 1 <sup>3</sup> / <sub>16</sub> " Wide x <sup>3</sup> / <sub>32</sub> " Thick
Handle	7½" Long
Sole	11/16" Wide

#### **Model T10262**

Blade	13/16" Wide x 3/32"	Thick
Handle .	101/4"	Long
Sole	1"	Wide

## **Inventory** (Figure 1)

Α.	Spokeshave	1
B.	Blade	1
C.	Wedae	1

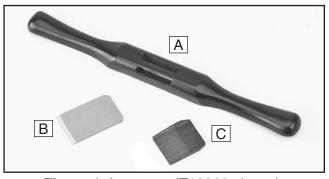

Figure 1. Inventory (T10262 shown).

## Setting the Blade

- **1.** Place the spokeshave on a flat surface, such as a workbench.
- 2. Insert the blade, bevel-face down through the rear opening of the spokeshave, then place the blade tip through the sole of the spokeshave for the initial cut, as shown in Figure 2. Ensure the blade is even from side to side.

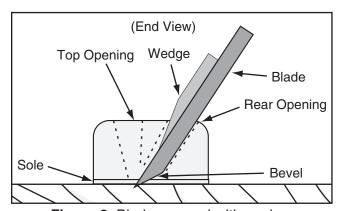

Figure 2. Blade secured with wedge.

- **3.** Slide the wedge downward over the blade (**Figure 2**) until the wedge is snug.
- **4.** The spokeshave, when assembled, will look like **Figure 3.**

# **AWARNING**

Damage to your eyes could result from using this item without proper protective gear. Always use safety glasses when operating the spokeshave.

## **Operation**

- 1. Lay out your design on the workpiece, then rough cut the shape.
- **2.** Secure the workpiece to prevent it from moving.
- Place the front and back of the sole (see Figure 2 on Page 1) and the blade on the workpiece, and orient the spokeshave so it will cut with the grain.
- **4.** For the first pass, set the blade depth to remove a minimal amount of material.
- 5. To push the spokeshave: Loosely grip the handles, place your thumbs behind the blade and your forefingers on the front side of the spokehave, as shown in Figure 4. Push the tool forward, applying even pressure. Make sure the front and back of the sole and blade evenly contact the workpiece while pushing the blade forward.

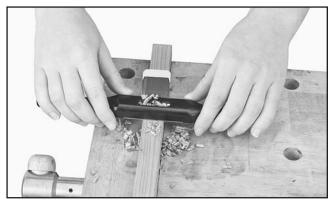

Figure 4. Example of pushing the spokeshave.

**To pull the spokeshave:** Turn the tool 180°, place your thumbs at the front of the tool and your forefingers behind the blade (see **Figure 5**). Pull the tool toward you over the workpiece.

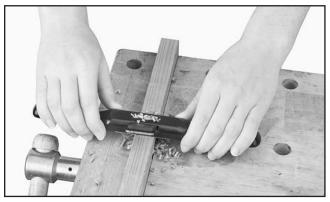

Figure 5. Example of pulling the spokeshave.

- **6.** To remove more material, increase the depth of cut by gently tapping the blade with a hammer.
  - —If the tool chatters, reduce the depth of cut, push or pull with the grain, or try skewing the blade angle.
  - —If the spokeshave skids without cutting, increase the depth of cut.
  - —If the spokeshave digs in and stops, decrease the depth of cut.

#### **Maintenance**

- Use a file and sharpening stone to flatten the sole.
- Sharpen the blade at a 30° primary bevel.
- Before storing the spokeshave, remove the blade, wipe it down with an oily cloth and store it in a dry place.

If you need help with your new spokeshave, call our Tech Support at: (570) 546-9663.
